# HealthCare Safety Net Update

## Executive Summary

Tennessee's Health Care Safety Net provides primary care, behavioral health, case management and emergency dental services to uninsured adults age 19-64. This update is provided in response to Tennessee Code Annotated 68-1-123, which requires a report to the General Assembly regarding data relating to access to care and healthcare safety net adequacy related issues.

Safety Net providers serve individuals who are uninsured, low-income, and disproportionately poor. In many communities, these patients are a member of a racial, ethnic or cultural minority population, challenged with barriers to health access in association with transportation, health literacy, distance, or geographic location. These factors can contribute to delayed care or lack of preventive care, resulting in unmet health needs that ultimately contribute to health disparities unique to the medically underserved uninsured.

Funding for local health department clinics, safety net dental services, and case management services is provided by the Tennessee Department of Health (TDH). Federally Qualified Health Centers (FQHC) are funded through TDH and through federal grants. Community / Faith-Based clinics receive funding from TDH as well as other non-state sources. Figure 1 shows the distribution of these various primary care clinics throughout Tennessee. In addition to these primary care services, behavioral health services are funded through the Department of Mental Health and Substance Abuse Services (DMHSAS).

In addition to these healthcare services, several insurance options are available for low-income Tennesseans:

- *CoverKids*—Serves children in families who do not qualify for TennCare but cannot afford private health coverage.
- *AccessTN*—Effective January 1, 2015, AccessTN members were transitioned to an off-Marketplace, individual health plan administered by BlueCross BlueShield of Tennessee.
- *CoverRx*—Pharmacy assistance program for low-income Tennesseans who do not have prescription drug coverage. This program provides a Covered Drug List of more than 200 generic medications, as well as brand name insulin and diabetic supplies.

During State Fiscal Year 2017 (July 1, 2016-June 30, 2017), Safety Net encounters included:

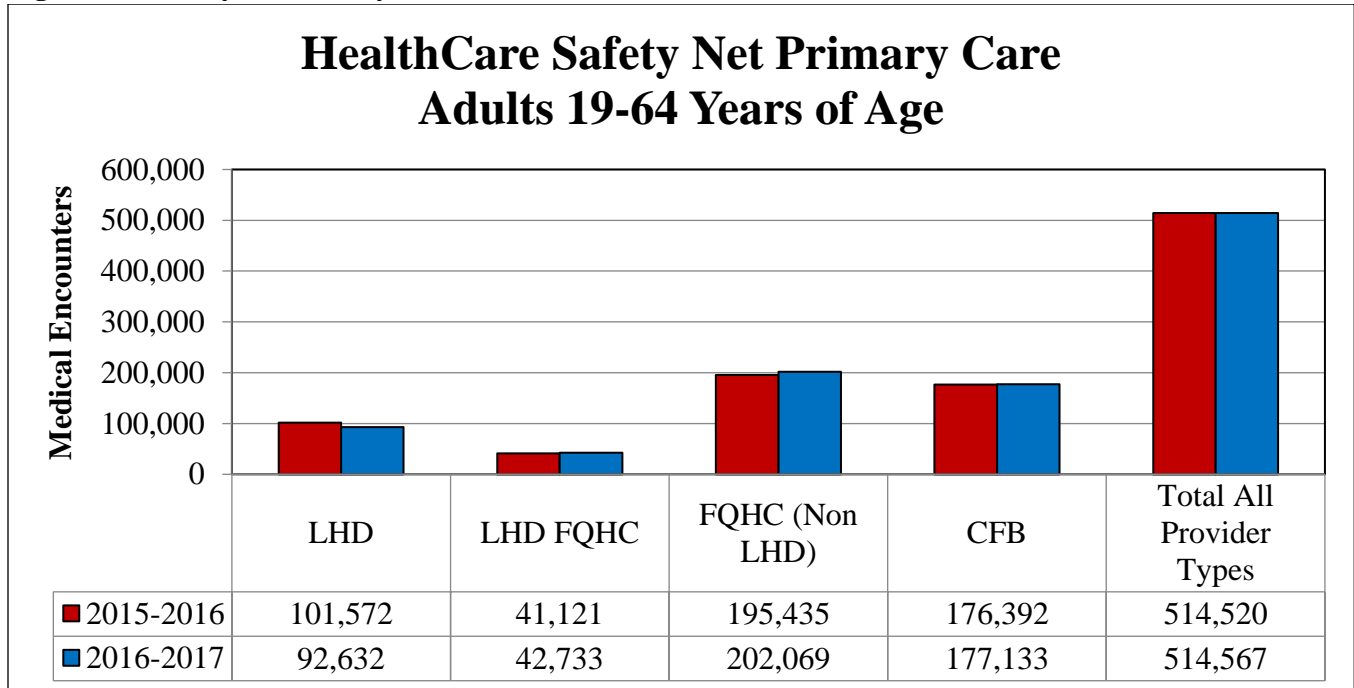

- 514,567 medical encounters, of which:
  - 92,632 occurred in Local Health Departments (LHDs)
  - 42,733 occurred in Local Health Departments (LHDs) designated as Federally Qualified Health Centers (FQHCs)
  - 202,069 occurred in Community Health Centers (CHCs) designated as FQHCs (non-local health departments)
  - 177,133 performed by Community/Faith-Based Providers which includes:
    - 107,133 performed by Community/Faith-Based Clinics; and
    - 70,000 Care Coordination encounters supported by Project Access
- 28,264 dental extractions through 20 dental providers
- 6,220 dental cleanings and counseling sessions (a newly-offered service full expanded in FY 17)
- 29,898 individuals receiving behavioral health services through 15 community mental health agencies

Encounter data for FY16 and FY17 are summarized in Figure 2. Medical encounters for FY 2017 were in line with FY 2016 medical encounters showing no significant change from the prior year.

**Figure 1: Primary Care Safety Net Sites, FY 2017**

**Figure 2: Primary Care Safety Net Encounters FY16 & FY17**

## I. Introduction

This report is provided in response to Tennessee Code Annotated 68-1-123, which requires the Commissioner of Health, in consultation with the Department of Finance and Administration and any other State agencies involved in the administration of the HealthCare Safety Net Program to provide a report to the General Assembly regarding data pertaining to access to care and healthcare safety net adequacy related issues. The report addresses the allocation of scarce healthcare resources with attention to assuring a safety net for access to health services that are part of the community systems of care in rural and underserved areas across the State. The report describes safety net activities for State Fiscal Year 2017 (July 1, 2016-June 30, 2017).

### Safety-Net Patient Population Characteristics & Demographics

Tennessee’s Health Care Safety Net provides primary care, behavioral health, case management and emergency dental services to uninsured adults age 19-64. According to “The Impact of TennCare: A Survey of Recipients, 2017”, a report released by the UT Knoxville Boyd Center for Business Economic Research, the statewide rate of uninsured adults in Tennessee increased from 6.6 percent in 2016 to 7.4 percent in 2017 (an increase of approximately 41,200 since 2016). The Safety Net patient population is comprised of medically underserved, uninsured low-income adults, who are confronted with barriers to health access associated with health literacy, language, culture, transportation, geography and other barriers unique to those of racial, ethnic or cultural minority patient populations.

#### *Age and Gender*

Table 1 shows patient utilization reported by Safety Net provider type, as the percentage of uninsured Adult Safety Net patient visits of the total patient population which is stratified by age range and gender.

**Table 1: 2017 Safety Net Patient Utilization by Age, Gender and Provider Type**

Age & Gender	Safety Net Provider Type		
	Community Health Center (FQHC)	Community Faith Based Clinic	Emergency Dental Provider
<b>Ages 19-39</b>	<b>37%</b>	<b>27%</b>	<b>38%</b>
<b>Ages 40-54</b>	<b>40%</b>	<b>44%</b>	<b>35%</b>
<b>Ages 55-64</b>	<b>23%</b>	<b>29%</b>	<b>27%</b>
<b>Female</b>	<b>58%</b>	<b>57%</b>	<b>60%</b>
<b>Male</b>	<b>42%</b>	<b>43%</b>	<b>40%</b>

Data source: Safety-Net Provider Quarterly Reports

Note: Data is based on Providers reporting data. Not all Providers supplied data for FY 2017.

#### *Health Status*

Safety Net providers assess their patient population for a variety of health behaviors, including those that directly influence the top ten leading causes of death in Tennessee as well as other population health conditions, such as heart disease, cancer, and diabetes. Safety Net providers collaborate with their local health departments and other community partners to focus on “upstream” primary prevention strategies to prevent chronic disease before it ever happens and to improve the health of the population. Table 2 shows the percentage of Safety Net patients (by clinic type) exhibiting various health behaviors or risk factors, and Table 3 shows the percentage of Safety Net patients with specific conditions related to health behaviors or risk factors.

**Table 2: Health Behaviors and Risk Factors among Safety Net Patients FY17**

	Percentage of Safety Net Patients Exhibiting Selected Health Behaviors and Risk Factors		
Health Indicator	Community Health Center (FQHC)	Community Faith Based Clinic	Emergency Dental Provider
Tobacco Use	34%	32%	41%
Obesity	35%	36%	14%
Physical Inactivity	41%	43%	23%

Data source: Safety-Net Provider Quarterly Reports

**Table 3: Selected Chronic Diseases among Safety Net Patients FY17**

	Percentage of Safety Net Patients Exhibiting Selected Health Behaviors and Risk Factors		
Disease	Community Health Center (FQHC)	Community Faith Based Clinic	Emergency Dental Provider
Diabetes	19%	19%	15%
Hypertension	40%	35%	28%
COPD	7%	8%	5%
Hyperlipidemia	20%	17%	16%

Data source: Safety-Net Provider Quarterly Reports

### **Health Access**

As shown in Figure 1, Primary Care Safety Net Sites are located in 87 of 95 counties to assure health access for Tennessee’s uninsured adults. In FY17, a \$12.5 million State appropriation was used to support services provided by 99 Community Health Center sites, commonly referred to as Federally Qualified Health Centers (FQHCs), 67 Community Faith-Based Clinics (CFB), including sites providing adult emergency dental care, and 4 Project Access grantees.

### **Underserved Areas**

Having health insurance alone does not assure that an individual will have access to health care. Without proximal access to providers and health care facilities, even the most robust insurance may not be useful. At the federal level, the Health Resources Services Administration (HRSA) designates units of limited access to health care providers as medically underserved areas (MUAs), medically underserved populations (MUPs), and health professional shortage areas (HPSAs). MUAs and MUPs identify geographic areas and populations with a lack of access to primary care services. HPSAs are federally designated counties, parts of counties (such as census tracts), or public facilities that have been recognized as meeting or exceeding the standards of need for certain services. Several HPSA designations exist:

- **Geographic:** the population to physician ratio is greater than 3,500:1.
- **Population:** a segment of the population experiencing barriers to care has a population to physician ratio that is greater than 3,000:1.
- **Facility:** a public or private nonprofit medical facility is providing primary medical care services to an area or population group designated as having a shortage of primary care professional(s), and the facility has insufficient capacity to meet the primary care needs of that area or population group. A Community Health Center or homeless clinic is an example of such a designation.

Access to care is an important social determinant of health. Safety Net providers located in underserved areas enhance health access to alleviate barriers to care in underserved communities. As shown in Attachments 1 and 2, all ninety-five counties in Tennessee have some type of shortage designation for primary care, dental and/or

mental health services. The Health Care Safety Net, as described in this report, fills gaps for some of Tennessee’s most underserved, at-risk adults—those who are uninsured and who might otherwise forego care altogether or suffer unnecessarily from preventable or treatable conditions attributed to disparities in access to health care.

## II. Access to Care and Array of Services

### A. Public Health Primary Care Safety Net Expansion

To address issues of access and care for the uninsured, particularly in those areas designated as underserved areas, Safety Net primary care services are available in Tennessee through multiple provider types. These include:

- Local Health Departments (LHDs) offering primary care (non-FQHCs)
- Local Health Departments that have been designated as FQHCs
- Community Health Centers (CHCs) designated as Federally Qualified Health Centers (FQHCs)
- Community/Faith-Based (CFB) Clinics

In FY17, these venues provided 514,567 medical encounters for uninsured Tennesseans ages 19-64 (see Table 4).

**Table 4: Healthcare Safety Net Medical Encounters by Provider Type**

Provider Type	FY2013	FY2014	FY2015	FY2016	FY2017
Local Health Department	129,241	120,328	114,255	101,572	92,632
Local Health Department designated as FQHC	44,030	40,940	38,111	41,121	42,733
Community Health Center (FQHC Non-LHD)	288,508	278,845	225,172	195,435	202,069
Community Faith Based	186,680	216,533	158,522	176,392	177,133
<b>Total</b>	<b>519,218</b>	<b>656,646</b>	<b>536,060</b>	<b>514,520</b>	<b>514,567</b>

Data Source: Safety-Net Provider Quarterly Reports

Funding for primary care offered through Local Health Departments is included in the TDH budget. Those Local Health Departments that are designated as FQHCs have successfully competed for federal funding to augment primary care services provided in their counties.

The General Assembly also appropriates funding for safety net primary care services through community-based FQHCs also referred to as Community Health Centers (CHCs), which are separate from those Local Health Departments designated as FQHCs and Community / Faith-Based Clinics (CFBs). The total state funded appropriation for these clinics is divided evenly between the FQHCs and the CFBs. In addition to direct clinical services, Safety Net funds support care coordination efforts through Project Access.

#### 1. State-Wide Expansion of the Capacity of Local Health Departments

On January 1, 2006, the Tennessee Department of Health (TDH) initiated a statewide expansion of primary care services to uninsured adult Tennesseans in the following ways: (1) increasing access for acute and episodic care and chronic disease management; and (2) offering the “best care possible” via preventive physical exams and essential health screenings. These strategies assist in individual preventive health maintenance, which in turn aids in reducing unnecessary hospitalizations. Prior to the Safety Net statewide expansion of primary care services on January 1, 2006, Local Health Departments in 17 counties across the state provided primary care in a total of 20 sites.

At present, primary care services are provided in 56 Local Health Department (LHD) sites in 50 of Tennessee’s 95 counties. In 16 of these counties, the Local Health Departments have been designated as Federally Qualified Health Centers (FQHCs).

In conjunction with primary care services, LHDs offer prescription medications, referral to patient drug assistance programs and referral for specialty care when necessary. For example, some Local Health Departments partner with local hospitals to offer discounted diagnostic services or a limited number of diagnostics at no charge for uninsured adult health department patients.

Some local hospitals have allowed the health department online access to emergency room records for shared patients. This promotes better continuity of care for patients managed in TDH Primary Care Clinics. Finally, in addition to expanded primary care services offered at many Local Health Departments, all health departments continue to provide traditional public health services such as family planning, communicable disease surveillance and management, breast and cervical cancer screening, immunizations, and Women, Infants, and Children services (WIC).

In FY17, 40 LHD sites provided approximately 92,632 medical encounters to uninsured, adult Tennesseans 19 to 64 years of age, a decrease of 8,940 encounters from those recorded in FY16 (101,572). FY17 data for these LHD sites are shown in Table 5. These encounter data do not include the 16 LHDs that are designated FQHCs.

**Table 5: Non-FQHC Local Health Department Primary Care Clinics Encounters**

Non-FQHC Local Health Department Primary Care Clinics	
Primary Care Age Groups	Uninsured Adult Encounters FY17
19-20 Years	1,925
21-24 Years	5,446
25-29 Years	7,585
30-34 Years	7,004
35-39 Years	7,425
40-44 Years	8,949
45-49 Years	12,566
50-54 Years	16,372
55-59 Years	14,755
60-64 Years	10,605
<b>Grand Total</b>	<b>92,632</b>

Data Source: TDH Patient Tracking Billing Management Information System (PTBMIS)

*2. State Funded Expansion of the Capacity of FQHCs, FQHC Look-A-Likes & LHD FQHCs*

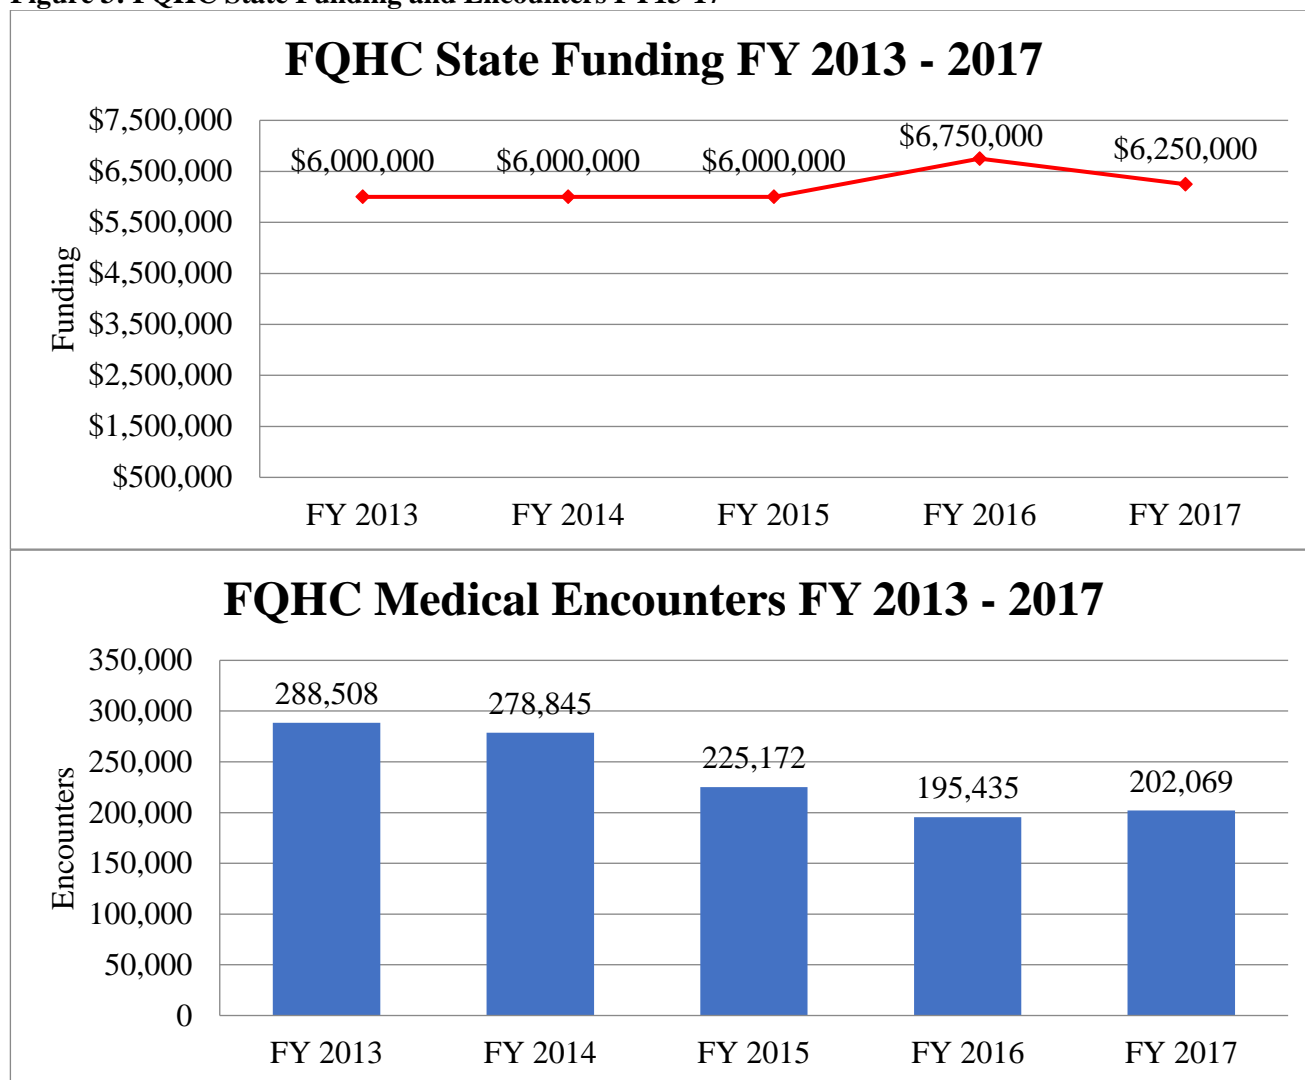

In FY07, State funding was made available to 23 provider organizations (with 84 clinical sites) designated as FQHCs (Federally Qualified Health Centers), a Medicare and Medicaid reimbursement designation for organizations that offer a broad range of primary care and prevention services. These included Community Health Center Organizations (CHCs) that receive United States Public Health Service Section 330 Grant Funding. Collectively, these entities provided services in 41 of Tennessee’s 95 counties. In FY07, these sites provided 217,673 medical encounters to uninsured adults.

In FY17, there were 30 Community Health Center FQHCs and one FQHC “look-alike” with just under 200 delivery sites across the state. Delivery sites include primary care, dental, and other miscellaneous service

delivery sites such as school-based health centers and homeless clinics. These sites provided 202,069 medical encounters in FY17, representing a 3% increase from FY16.

Figure 3 shows the trend for FQHC (non-LHD) safety net funding as well as the FY13-17 trend of medical encounters.

**Figure 3: FQHC State Funding and Encounters FY13-17**

These private, nonprofit, community-directed health care facilities provide high-quality, cost-effective and comprehensive primary and preventive care to medically underserved and uninsured Tennesseans. In 2016 FQHCs and FQHC Look-A-Likes in Tennessee provided care to nearly 412,000 patients. According to the Tennessee Primary Care Association (TPCA), on average approximately 33% of Community Health Center patients are uninsured; however, that number may be as high as 60% for some centers. Approximately 82% of FQHC patients have income levels below 100% of the Federal Poverty Level. Historically, Community Health Centers participated in the Health Disparities Collaborative, a national effort to improve health outcomes for all medically underserved people with chronic diseases, such as diabetes, cardiovascular disease, depression and asthma. This initiative prepared Community Health Centers to begin transforming their practices into Patient Centered Medical Homes (PCMHs). The PCMH is a “way of organizing primary care that emphasizes care coordination and communication to transform primary care into ‘what patients want it to be’ . Medical homes can lead to higher quality and lower costs, and can improve patients’ and providers’ experience of care.” (National Committee for Quality Assurance, NCQA). Health centers in Tennessee are working on PCMH

Recognition through the NCQA or Primary Care Medical Home Certification through The Joint Commission (TJC). The first Tennessee health center achieved PCMH Certification in March 2013. Through October 2017, 18 FQHCs have achieved PCMH recognition (NCQA) or certification (TJC) at 68 sites.

These centers are also working hard to improve clinical quality. The Center for Quality in Community Health is a network of Community Health Centers and partners that supports a continually evolving health care system by sharing information and expertise to facilitate learning, support quality improvement and develop leadership. With timely, relevant data, the Center for Quality in Community Health promotes collaboration, sustainability, cost effectiveness and healthier communities in Tennessee.

Except for three centers, all Tennessee Community Health Centers now have an electronic health record and will continue working towards achieving federal meaningful use criteria. Community Health Centers are consistently providing the recommended standards of care for chronic health conditions, which should result in improved health outcomes for participants. In addition, all Community Health Centers are eligible and may participate in the federal 340B Drug Pricing Program, which provides significant savings on pharmaceuticals for their patients.

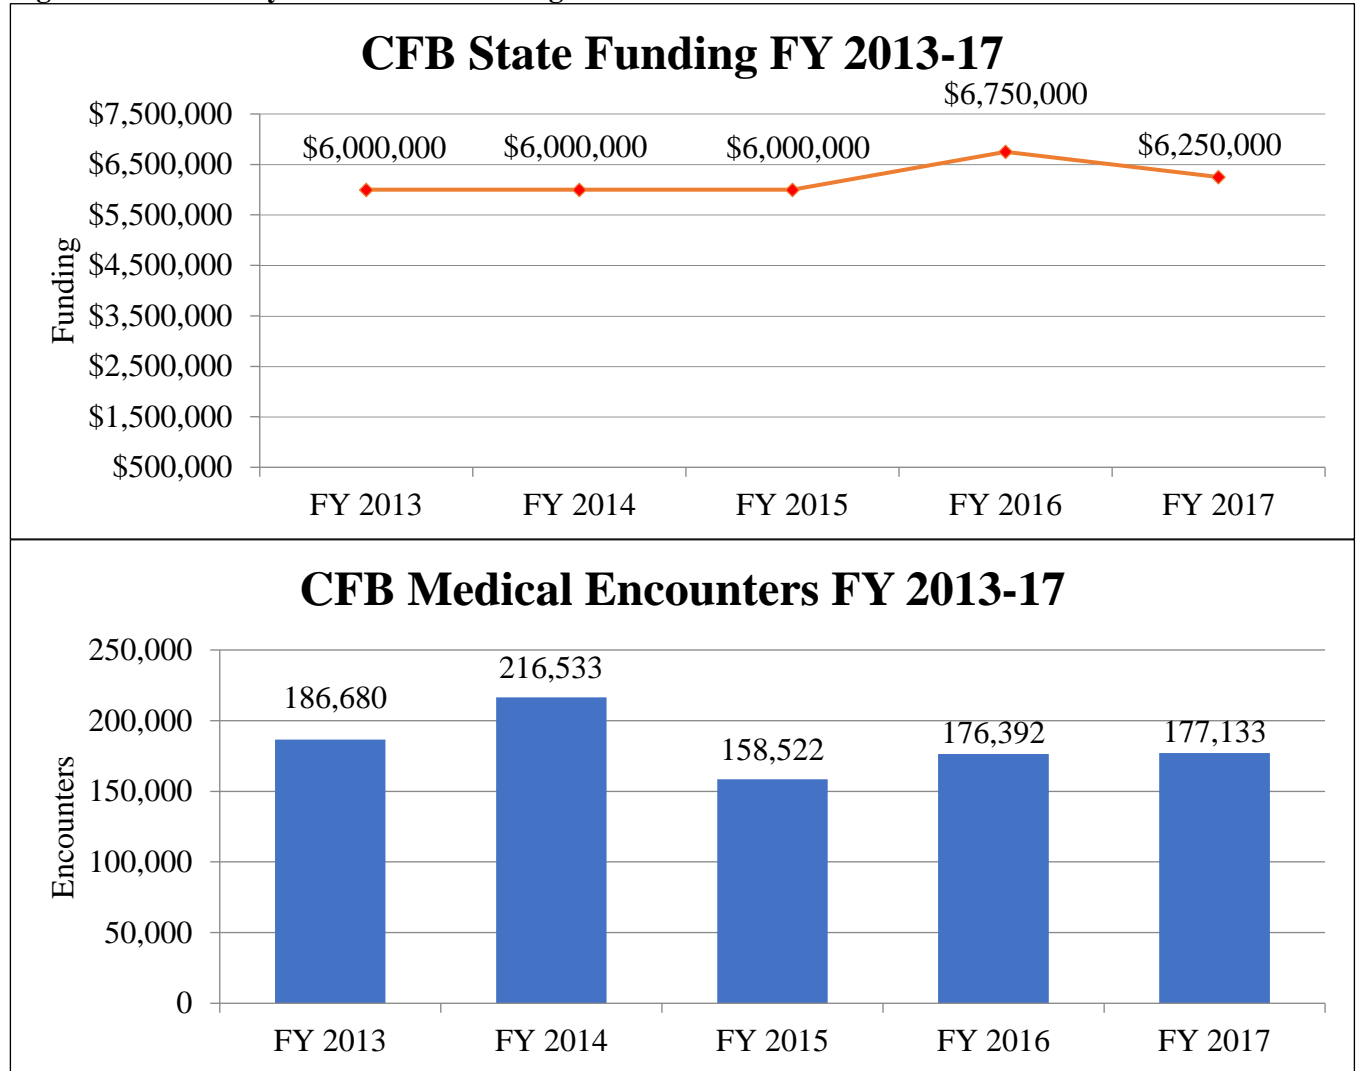

Many Tennessee Community Health Centers are using telehealth to improve patient access to primary and specialty care. Telehealth uses electronic information and telecommunications technologies to support long-distance clinical health care, patient and professional health-related education, public health and health administration. Nationwide studies have found that telehealth can reduce the cost of health care, reduce travel times, and result in better management of chronic diseases. Additionally, some Community Health Centers are using telehealth to provide care to students in public schools. The use of telehealth in schools can reduce student absenteeism, reduce the amount of work missed by parents to transport children to physicians' offices, and improve school nursing staffing.

### *3. Statewide Expansion of the Capacity of Selected Faith-Based, Community-Based, Rural Health, and Federally Funded Centers*

Since the program's inception, the Department of Health has awarded safety net grant funding to providers of primary care services in faith-based, community-based, rural health, and other federally funded centers. These sites provide a primary care medical home to uninsured adults for treating health conditions including hypertension, diabetes, hyperlipidemia, allergies, and asthma. In addition, laboratory services, pharmacy services and referrals to specialty care are provided.

Figure 4 shows trends for both the annual amount of funding appropriated by the General Assembly, as well as the number of uninsured adult medical encounters from fiscal years 2008 to 2017.

**Figure 4: Community/ Faith-Based Funding FY13-17**

In addition to sites providing direct clinical services, state funding is also provided to Project Access networks. These organizations do not deliver primary care services but instead offer essential care coordination services for uninsured adults in metropolitan areas and provide referrals to primary care medical homes, specialty care services, and diagnostic services. Diagnostic services provided at either a medical home or by a specialist can in many cases prevent costly hospital emergency room visits. Agencies that received funding in FY17 were: Nashville Academy of Medicine, Appalachian Mountain Project Access (AMPA), Hamilton County Project Access, and Knox County Project Access.

The Project Access Nashville network (formerly Bridges to Care network) is operated by the Nashville Academy of Medicine. The network is comprised of nine hospitals and ten rehabilitation and surgery centers. The Project Access Nashville program coordinates specialty care, diagnostic testing, and hospital care for 23 separate primary care centers including federally subsidized primary care clinics, faith-based and community clinics and private hospital-sponsored primary care clinics. The program also works with dental partners and mental health partners to meet patient needs. Uninsured adults who are enrolled in Project Access Nashville and are at 200% or below poverty level have access by referral to approximately 1,188 volunteer physician specialists and physician extenders through the Project Access Nashville-Specialty Care Program. In FY17, the Nashville Academy of Medicine provided 5028 care coordination encounters for patients, including specialty care encounters with physicians and hospital encounters. Donated medical services have surpassed over \$37 million since the program began in 2005, and the total reported value of coordinated care for FY17 was \$2,435,032.

Appalachian Mountain Project Access (AMPA) network is comprised of more than 600 volunteer physicians and 2 hospitals. AMPA coordinated specialty care services resulting in 9,220 reimbursed encounters in FY16-17 and 858 unreimbursed encounters. Donated medical services have surpassed over \$60 million since the program began in 2008, including more than \$8.3 million in services in FY17. AMPA coordinates specialty care, diagnostic testing, and hospital care for 8 separate primary care clinics. These primary care homes include 6 Federally Qualified Health Centers, one Local Health Department and one Community-Based Clinic. Program partners include ancillary providers, durable medical equipment, social service agencies, and faith-based organizations. AMPA provided care for 1,831 unduplicated individuals in FY17. The average monthly caseload is 300 individuals.

The Hamilton County Project Access network is comprised of more than 900 physician and physician extender volunteers, and coordinated services for 30,696 reimbursed medical encounters and 986 unreimbursed encounters in FY17. Donated medical services have surpassed over \$161 million since the program began in April 2004, including more than \$13.8 million in services in FY17. The Hamilton County program coordinates specialty care, diagnostic testing, and hospital care for 14 separate primary care centers. These primary care homes include two Federally Qualified Health Centers, a Latino health center, two Faith-Based Community Health Centers, 4 Local Health Departments, and several community-based clinics. Program partners include three hospital systems with seven separate locations, rehabilitation hospitals and centers, and a critical care hospital. The Hamilton County program also works the Mental Health Cooperative and other mental health partners. Project Access provided care for 3,374 unduplicated individuals in FY17. The average monthly patient load is between 500 and 600 individuals.

Knoxville Area Project Access (KAPA) has a network comprised of 1,626 physicians, physician extenders, and all Knox area hospitals. Since inception in 2006, these providers have donated over \$195 million in medical services. In FY17, KAPA was able to coordinate 48,844 medical encounters for its patients.

In 2015, collaboration was established between the Department of Health's Healthcare Safety Net Program and the Tennessee Charitable Care Network (TCCN). TCCN, granted incorporation as a 501c3 nonprofit charitable organization in 2014, was founded to provide a collective voice for free and charitable clinics across the state. TCCN's mission is to provide support, education and representation for nonprofit organizations that provide charitable health care services to low-income, uninsured, and under-served Tennesseans. Community/Faith Based health care providers provide free or reduced cost medical, dental, and mental health care services including: primary care, specialty care, preventive dental services, dental extractions, restorative dental, spiritual counseling, mental health services, substance abuse services, vision services, diagnostic services, pharmaceutical assistance, and wellness programs.

In collaboration with The Tennessee Department of Health, the Tennessee Charitable Care Network member clinics help uninsured patients access over \$9.5 million in medications annually. Charitable care clinics are making a difference in the lives of Tennesseans across the state by providing consistent, culturally-sensitive primary care, and by minimizing inappropriate and costly utilization of emergency room services and other hospital resources. Volunteers are at the heart of charitable clinic services. More than 1,100 health care providers and 2,000 lay volunteers give approximately 66,000 hours annually to help charitable clinics meet their mission of serving Tennessee's uninsured and underserved.

A major accomplishment for the Community/Faith Based providers includes the expansion of the emergency dental service program to include prophylactic dental cleanings. Funding was allocated in FY16 and FY17 to Community/Faith Based dental providers to include dental cleanings as a part of the patient's oral health treatment plan. Regular cleanings decrease the risk of caries and gingivitis which, if left untreated, can lead to the loss of permanent teeth. Early intervention to mitigate the risk of dental disease is now available as an oral health care primary prevention service.

#### *4. Access to Statewide Dental Services*

Safety Net legislation and funding were intended to enable provision of primary care to TennCare dis-enrollees and was not intended to exceed the level of previous benefits (e.g., TennCare does not cover adult dental services). However, access to dental services, particularly emergency extractions, was identified as an important service that Safety Net funding could support. TDH provides support and operates preventive dental and adult dental services programs with supplemental funding from county governments, community partnerships, and other public and private agencies and organizations, many on a part-time basis.

TDH offers dental services in 48 counties through 49 Local Health Departments and one regional public health office. During FY17, 44 of the 49 dental clinics were staffed and open 1 to 5 days per week. The remaining five clinics were closed due to lack of available staff. All staffed clinics provided emergency dental care for adults in FY17.

#### *Expanded Oral Health Care Workforce and Dental Services in Local Health Departments*

Four of the Health Department dental clinics offer expanded services for a targeted adult population: the Fayette County Health Department, the Tipton County Health Department, the Maury County Health Department, and the Montgomery County Health Department. Fourth year dental students from the University of Tennessee Health Sciences Center and Meharry Medical College School of Dentistry rotate through these facilities providing care to the underserved.

#### *Metropolitan Health Department Oral Health Services*

Emergency dental and oral health care varies at each metro facility. Both Hamilton and Knox County provide emergency dental services to uninsured and underinsured adults ages 19-64 at their health departments.

The Metro Public Health Department in Davidson County provides adults emergency dental services at the Lentz Public Health Center and coordinates services with the Matthew Walker Comprehensive Care Clinic to access additional adult emergency dental care.

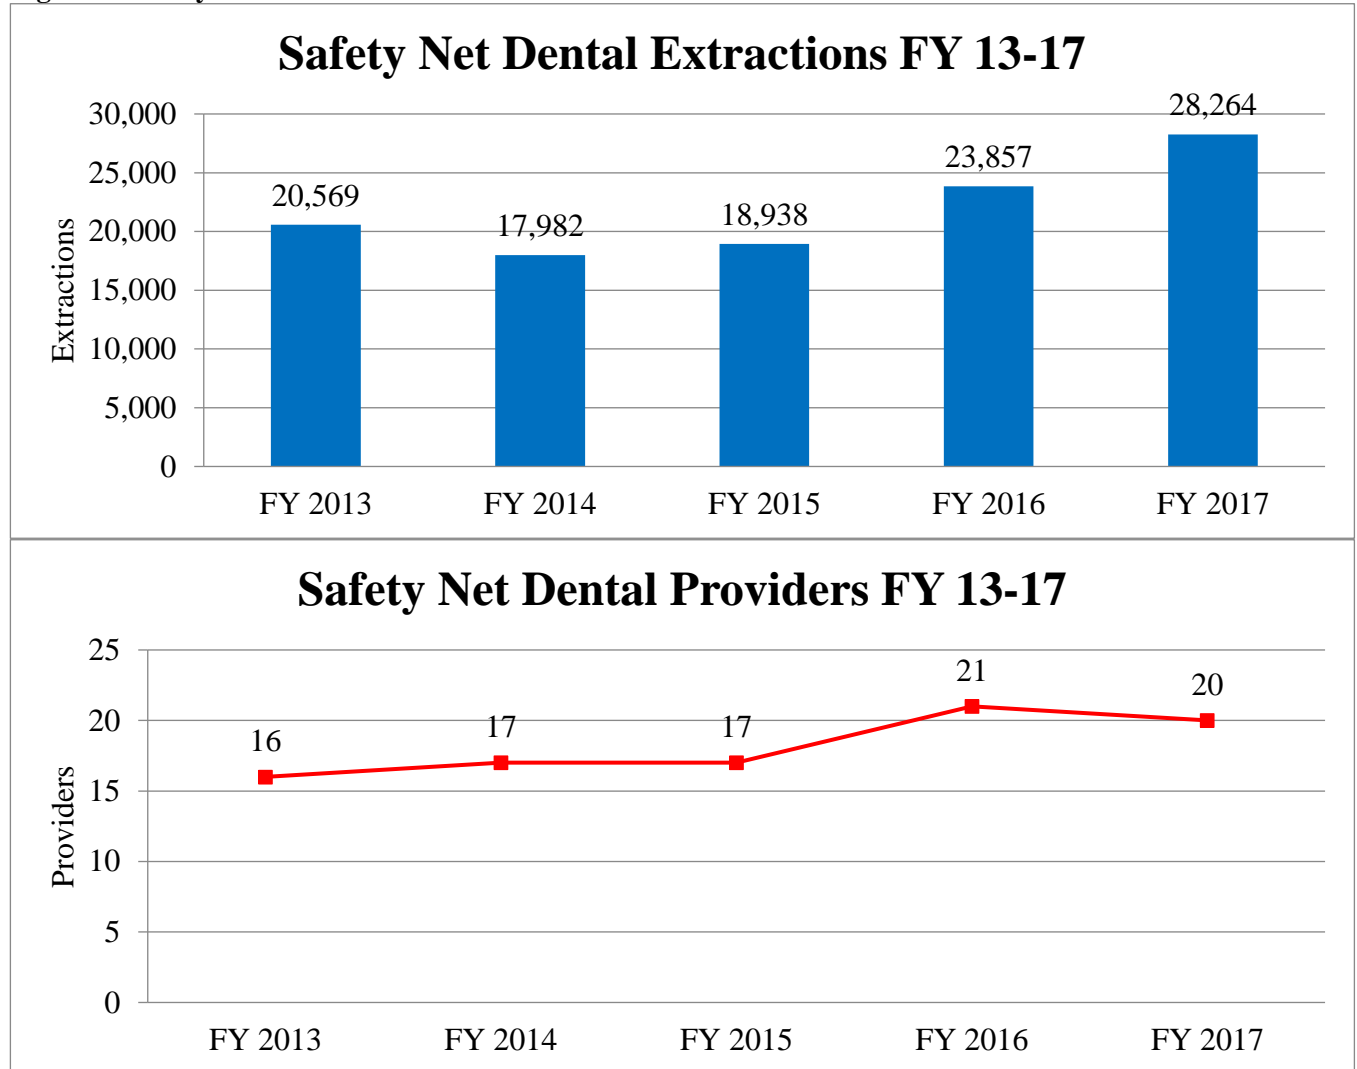

The Shelby County Health Department provides comprehensive dental services to patients less than 21 years of age and adult emergency dental services. Adults seeking non-emergency dental services are referred to full service dental clinics in the community.

The Jackson-Madison County and Sullivan County Health Departments do not currently provide dental services.

In addition to services provided through Local Health Departments, TDH began funding community-based dental services for uninsured adults ages 19-64 in FY08. In FY17, twenty-one sites were awarded grants from TDH. These sites reported performing 28,264 extractions. A six-month program expansion initiated in FY16 for hygienic cleaning and oral hygiene counseling was fully implemented in FY17 resulting in 6,220 patient cleanings and counseling sessions.

Figure 5 shows the trend for safety net dental providers and extractions for FY13-17.

**Figure 5: Safety Net Dental Providers and Extractions FY13-17**

Data Source: Safety Net Provider Quarterly Reports

**B. Behavioral Health Safety Net of Tennessee**

*1. Program Background and Overview*

In response to Tennessee Public Chapter No. 474 and Section 59 of the Tennessee Appropriations Act of 2005, the former Tennessee Department of Mental Health and Developmental Disabilities (TDMHDD), currently the Tennessee Department of Mental Health and Substance Abuse Services (TDMHSAS), created the Mental Health Safety Net (MHSN) to provide essential mental health services to the 21,000 individuals identified as severely and/or persistently mentally ill (SPMI/SMI) of the 191,000 individuals who were dis-enrolled from the TennCare Program due to TennCare Reform.

In FY09, the MHSN and State Only program, the former out-patient portion of TennCare Partners initiative, were merged into a single program. This combined program was named the Behavioral Health Safety Net of Tennessee (BHSN of TN) and served the State Only outpatient population as well as the original MHSN population. At this time, the BHSN of TN became eligibility-based, and opened enrollment to all Tennesseans who met the eligibility criteria. To facilitate the implementation of the BHSN of TN with its expanded enrollment base, an additional \$10 million was appropriated. There is no federal financial participation for BHSN of TN service recipients. The ability of TDMHSAS to cover services is dependent on annual appropriations by the legislature.

As of September 1, 2013, individuals who have Medicare Part B, and meet all other eligibility requirements for the BHSN of TN may be enrolled. They are eligible for 4 approved services: Case Management, Medication Training and Support, Peer Support and Psychosocial Rehabilitation Services.

During FY17, the BHSN of TN partnered with 15 Community Mental Health Agencies that provided vital behavioral health services to approximately 29,898 individuals across the state of Tennessee. The top services utilized were: Case Management; Individual Therapy; Psychosocial Rehabilitation (group); and Office Visits for Evaluation and Management.

The BHSN of TN continues to provide services including assessment, evaluation, diagnostic, therapeutic intervention, case management, peer support services, psychosocial rehabilitation services, office visits for evaluation and management, labs related to medication management, and pharmacy assistance and coordination.

### C. Special Populations

#### 1. Ryan White Part B Funds

The General Assembly has appropriated \$7.2 million of recurring state funding to assist TDH with providing HIV treatment for former TennCare clients and a growing population of uninsured low income clients. Initial Safety Net funding began in 2006 with an allocation of \$1.2M. These funds, along with drug company rebates in 2016, have allowed the Department to continue serving all eligible individuals in a continuously growing State Aids Drug Assistance Program (ADAP) with critical HIV medications and outpatient medical services through the HIV Centers of Excellence network of providers. In FY17, the network served 5,400 unduplicated clients through the Insurance Assistance Program (IAP) and 2,655 unduplicated clients through the HIV Drug Assistance Program (HDAP) (see Table 6). The Centers of Excellence clinics consist of a coordinated network of clinics and private practitioners across the State, which provides a comprehensive approach to AIDS and HIV therapy at thirteen locations including five health departments. Life-saving treatment is provided to some of the State’s most vulnerable residents; many would go without treatment and care if State funds were unavailable to supplement federal funds for the program.

Table 6 shows the enrollment in the Ryan White Part B HIV Drug Assistance Program (HDAP) and Insurance Assistance Program (IAP) over the past 5 years.

**Table 6: AIDS Drug Assistance Program (ADAP) Growth**

Federal Fiscal Year	HDAP		IAP		Total	
	Enrollment	% Growth	Enrollment	% Growth	Enrollment	% Growth
2012 – 13	3,662	4%	1,863	7%	5,525	5%
2013 – 14	3,767	3%	2,324	25%	6,091	10%
2014 – 15	3,314	-12%	3,980	71%	7,294	20%
2015 – 16	2,442	-26%	4,981	25%	7,423	<1%
2016 – 17	2,655	9%	5,400	8%	8,055	9%

### D. Insurance Options for the Uninsured

#### 1. CoverKids

Qualifying families in Tennessee have been able to receive comprehensive health insurance since 2007 through CoverKids, which serves children in families who do not qualify for TennCare but cannot afford private health coverage. Administered by BlueCross BlueShield of Tennessee, the program covers children whose families

earn within 250 percent of the federal poverty level (FPL), which was \$61,500 per year for a family of four in 2017, as well as pregnant women. CoverKids had 73,066 members enrolled as of June 30, 2017.

## 2. *AccessTN*

Enrollment in AccessTN has been closed since October 31, 2013. Effective November 1, 2016, AccessTN members were enrolled on the Federally-Facilitated Marketplace and were provided Silver-level health coverage based upon the availability of carriers in each region of the State. The premiums for these individual health plans are paid for by the State for members who continue to be eligible for the AccessTN program. AccessTN had 195 members as of June 30, 2017.

## **E. Pharmacy Assistance**

### 1. *CoverRx*

CoverRx is the State's pharmacy assistance program for Tennesseans who do not have prescription drug coverage. Only individuals below the federal poverty level are eligible for CoverRx benefits. With a Covered Drug List of more than 200 generic medications, as well as brand name insulin and diabetic supplies, CoverRx provides affordable medications to those who may otherwise be unable to fill prescriptions. Qualifying CoverRx members pay no monthly premiums, only low co-pays for a 30-day or 90-day (if through mail order) supply of medications listed on the Covered Drug List. Each member has a five prescription-per-month limit; however, insulin and diabetic supplies are not included in the limit.

There is also a discount portion to the program for select brand name, generic, and controlled substance products which are not included on the Covered Drug List. The member pays full price for the prescription less a flat discount.

CoverRx has always included members of the Behavioral Health Safety Net population, who may receive certain specific brand name mental health medications through the discount portion of the program.

CoverRx had 31,549 members as of September 31, 2017.

### **III. Summary**

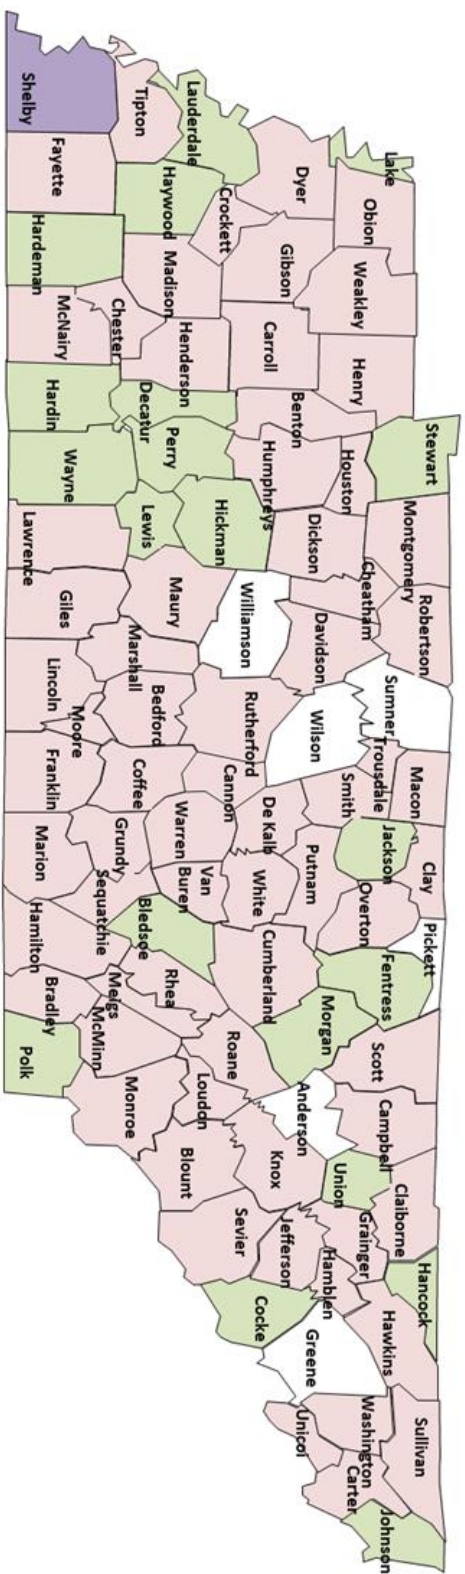

The Tennessee Department of Health has assessed the state of the healthcare safety net in Tennessee and evaluated “the array of services, adequacy of services, and access to care.” The assessment shows a comprehensive approach for healthcare safety net services both long and short term through a strong collaborative effort among state, public/private, not-for-profit and for-profit sectors.

Specifically, the conjoined effort among all Health Care Safety- Net provider types resulted in a total of 514,567 medical encounters provided to uninsured adults in FY17. This is in line with encounters from the previous year.

Safety Net appropriations have proven invaluable to hundreds of thousands of Tennesseans caught in a changing health care landscape of hospital closures, changes in availability, cost and coverage of insurance products, and continuing shortages of primary care in selected communities. Access to preventive care, primary care and care coordination services is pivotal to providing quality healthcare to the uninsured adult population in underserved communities.

## Glossary of Terms

**Department** - The Tennessee Department of Health.

**FQHC** – Federally Qualified Health Centers. The centers are public and private non-profit clinics that meet certain criteria under the Medicare and Medicaid programs and receive federal grant funds under the Health Center Program, established at Section 330 of the Public Health Service Act (PHSA). Some target specially defined populations such as migrant and seasonal farmworkers or homeless persons, while others target a general community and are commonly referred to as “community health centers.” These facilities meet the requirements of 42 U.S.C. § 1396d(1)(2)(B) and 42 U.S.C. § 254b.

**FQHC Look-Alike** – Federally qualified health centers-funded health centers that are public and private non-profit clinics that meet certain criteria under the Medicare and Medicaid program but do not receive federal grant funds under section 330 of the public Health Services Act (PHSA). Some target specially defined populations such as migrant and seasonal farmworkers or homeless persons, while others target a general community and are commonly referred to as “community health centers.” These facilities meet the requirements of 42 U.S.C. § 1396d(1)(2)(B)(iii) and 42 U.S.C. § 254b.

**Health Care Safety Net for Uninsured** – Pursuant to Tenn. Code Ann. §71-5-148(a) the health care safety net program provides funding in support of medical and dental assistance to uninsured adults, 19-64 years of ages.

**Health Care Safety Net Funds** - State funding set aside by Tenn. Code Ann. § 71-5-148 to expand and augment Tennessee’s health care safety net.

**Health Care Services** - As applied to FQHC’s by Tenn. Code Ann. § 71-5-148(2) means the same as “Primary Care” and “Required Primary Health Services” and “Behavioral Consultations” as applied to FQHC’s by 42 U.S.C. § 254b and incorporated in 42 U.S.C. § 1396d(1)(2)(B).

**Health Professional Shortage Area (HPSA)** - Federally designated county, parts of a county (such as a census tract), or public facility recognized as meeting or exceeding the standards of need for certain services. Primary care HPSA status is a national measure used to denote difficulties in access to care. A HPSA must meet or exceed the following thresholds:

- For a Geographic designation, the population to physician ratio is greater than 3,500:1.
- For a population designation, a segment of the population experiencing barriers to care has a population to physician ratio that is greater than 3,000:1.
- For a facility designation, a public or private nonprofit medical facility is providing primary medical care services to an area or population group designated as having a shortage of primary care professional(s), and the facility has insufficient capacity to meet the primary care needs of that area or population group. A community health center or homeless clinic is an example of such a designation

**Medical Encounter** - A day on which a primary care provider meets with an uninsured adult regardless of the number of procedures performed or the number of primary care providers who see the uninsured adult.

**Medically Underserved Area (MUA)** – Federal designations that involve the application of the Index of Medical Underservice (IMU) to data on a service area to obtain a score representing the completely

underserved to the best served. Under the established criteria, each service area found to have an IMU score of 62.0 or less qualifies for designation as an MUA.

**Medically Underserved Population (MUP)** – Federal designations that involve the application of the Index of Medical Underservice (IMU) to data on an underserved population group within an area of residence to obtain a score for the population group.

**Primary Care Provider or PCP** - A physician, licensed psychologist, licensed clinical social worker, nurse practitioner, certified nurse midwife, or physician assistant actively licensed to practice in Tennessee.

**Sliding Scale** - Rates charged to an uninsured adult based on 42 U.S.C. § 254b(k)(3)(G) and 42 C.F.R. § 51c.303(f).

**Uninsured Adult** - A patient aged nineteen (19) through sixty-four (64) years who is uninsured pursuant to Tenn. Code Ann. §71-5-148(a).

**Unduplicated Uninsured Adult Patient**- A patient is counted only once for each type of service, even if patient received services on multiple occasions during the grant period.
