Behavioral Health Planning Region 3 Results Summary 139

Introduction

The *Tennessee Together Student Survey Results Compendium 2018-2019: Detailed Tables* is a compilation of tables presenting weighted statewide statistics from the Tennessee Together Student Survey administered during the 2018-2019 school year. The 2018-2019 Tennessee Together Student Survey was administered to 8th-, 10th-, and 12th-grade students enrolled in Tennessee public schools. The final sample included 28 counties with 21,766 survey respondents. The detailed tables in this report present weighted state and Behavioral Health Planning Region summaries of survey responses profiling student tobacco, alcohol, marijuana, prescription drug, and other drug use. State-level data tables are named with the prefix "TN" and Behavioral Health Planning Region tables are named with the prefix "BH" and the region number. Survey results are also presented by grade level, as well as by race/ethnicity and gender. The findings from this report can be used by the state and local school districts to identify emergent needs related to alcohol and drug use prevention; to monitor changes in alcohol, tobacco, and drug use prevalence and attitudes over time; and to assess the impacts of community-wide efforts to prevent and reduce alcohol and drug misuse among youth within local schools and communities.

The detailed tables in this document include weighted prevalence estimates (%) and 95 percent confidence intervals. Post-stratification weighting of survey responses by grade level was used to adjust for school and student nonresponse. The overall weights were scaled so that the weighted count of students equaled the total state enrolled population, and the weighted proportions of students in each grade matched the state population proportions. Enrollment data from the Tennessee Department of Education 2017-2018 Membership File were used to estimate student populations. To account for the complex sampling designs, statistical analyses were conducted on the weighted data using STATA statistical software. Table A documents the size of the unweighted survey sample for each participating county.

This document was developed to accompany the *2018-2019 TN Together Student Survey Results* narrative report which provides a more descriptive introduction about the survey administration and methodology, as well as a comprehensive analysis of survey results.
