

Earn, Save & Spend

Think of something that you need or want. How much money would you need to buy it? Think of ways you could **earn** money to **save**, so you could have enough to **spend**.

- **Earn** means to receive money in return for work or services performed.
- **Save** means to set something, like money, aside or store it for later use.
- **Spend** means to pay money for a product or service.

For example, if you want a baseball glove that costs \$20, then you need to **earn** and **save** \$20 before you can buy it. If you **earn** \$10 a week and **save** \$5 for four weeks, you would have enough money to **spend** for the glove. You would also have \$5 left to **spend** each week on other things.

Color the banks below that have enough money to pay for a game that costs \$6.
