Acknowledgements

On behalf of the Tennessee Department of Health, the State Office of Rural Health & Health Access wishes to express gratitude to our stakeholders, partners, policy and decision makers, health care professionals, and advocates for your ongoing support and contributions to this annual report.

We would also like to acknowledge the Uninsured Adult Health Care Safety Net Provider network of Community Health Centers, Community and Faith-Based organizations, Project Access entities, as well as respective clinical and administrative professionals for their continued collaboration in collecting and reporting the data and information used to complete this report.

Additionally, we want to recognize the hard work and dedication of both the Tennessee Primary Care Association and the Tennessee Charitable Care Network, whose memberships consist of Uninsured Adult Health Care Safety Net providers. They are instrumental in providing support, advocating on behalf of the members, and provide informed policy recommendations and decisions to enhance equitable access to care for uninsured, underinsured, and low- income adults in Tennessee.

We also want to recognize the contributing Tennessee State Government Departments which include the Tennessee Department of Mental Health & Substance Abuse Services, Tennessee Department of Economic and Community Development, Tennessee Department of Finance and Administration, and Division of TennCare.

Lastly, we acknowledge the efforts of the Tennessee Department of Health State Offices and Program Areas for providing current data, metrics, and relevant information, to include Community Health Services, Ryan White Part B Program, Oral Health Services, and the Uninsured Adult Health Care Safety Net Program.

Executive Summary

The Uninsured Adult Health Care Safety Net Fund, administered by the Tennessee Department of Health, State Office of Rural Health and Health Access, delivers access to healthcare for uninsured adults ages 19-64 who live in Tennessee through Federally Qualified Health Centers (FQHC), Community and Faith-Based Clinics (CFB), Dental services, and Project Access entities. Local Health Departments (LHD) also provide primary care, acute care, and dental care services to the uninsured through funding from the annual departmental budget. The Tennessee Department of Mental Health and Substance Abuse Services (TDMHSAS) administers the Behavioral Health Safety Net program.

In Tennessee, during FY21 (July 1, 2020 to June 30, 2021), the Tennessee Department of Health, Tennessee Department of Mental Health and Substance Abuse Services, Tennessee Department of Finance and Administration, and the Division of TennCare allocated state funding to support safety net services in rural and underserved areas to the estimated 10.1 percent of adult Tennesseans who are uninsured. This funding increases equitable access to primary medical, dental, mental, and behavioral health care, telehealth, as well as care coordination services, which connects patients to specialty care and other support services.

In FY21, the Tennessee Department of Health, State Office of Rural Health and Health Access made changes in both funding and operations to better serve uninsured adults and the providers who are recipients of the funds. Dental funding was expanded to cover preventive and restorative services and currently includes telehealth as an encounter type.

With the input of FQHC and CFB partners, the overall funding was no longer divided into separate FQHC and CFB allocations. Instead, all mental health, dental, and primary care encounters were funded through a single "Primary Care Plus" category, recognizing that these services are often delivered at the same clinical sites and are all growing service needs.

The funding for these Primary Care Plus services has constituted 82.5 percent of the safety net budget historically, and this percentage remained constant. Project Access Care Coordination for specialty services remained a separate allocation, which comprised 17.5 percent of the safety net base recurring budget. Additional recurring state funding appropriated by the General Assembly was used to add an additional 12 dental and 5 primary care clinical sites via an RFA process. The additional funding expanded the number of Project Access sites to expand specialist access to west Tennessee and to rural regions of the state. And, in keeping with the will of the General Assembly and the need of service providers, the additional funding also increased the per encounter reimbursement for providers.

The Uninsured Adult Health Care Safety-Net program was allocated a total of \$19.9 million in recurring funding for FY21 and divided in two service categories, Primary Care Plus and Project Access per the above description. The Primary Care Plus programs provided 326,620 Primary Care encounters to 162,494 Unduplicated Patients, including 15 percent Behavioral Health and 31 percent Telehealth encounters. In FY21, dental funding resulted in a total of 42,260 patient visits for 24,982 unduplicated patients, and 102,340 oral health procedures including extractions, fillings, removable prosthetics, cleaning and prevention, and diagnostic services.

The Project Access program provided 134,342 Specialist Care Coordination Encounters to 13,128 Unduplicated Patients. In FY21, Project Access expanded to include West Tennessee. Collectively, Project Access programs coordinated \$53 million in donated health services, for a return of nearly \$9 for every \$1 of state-allocated funding.

Local Health Departments provided 47,124 medical encounters to 24,998 unduplicated patients ages 19-64 years thru the 40 primary care clinics. These clinics are not designated as FQHCs and do not receive state Safety-Net funding. However, they are supported by state funding allocated separately through the TDH Division of Community Health Services.

In FY21, TDMHSAS administered \$28 Million in funding to the Behavioral Health Safety Net for Adults program providing essential outpatient mental health and support services for uninsured adults 18 years and older. The funding supports a statewide provider network of 15 community mental health agencies operating over 150 sites in 73 counties.

Impact of COVID-19

The COVID-19 pandemic diminished the ability to provide healthcare to uninsured adults in all service delivery types across the state. Unfortunately, CFB clinics were not eligible to receive the first round of the federally funded CARES Act Provider Relief Fund, therefore, the Tennessee Department of Health disseminated additional COVID-19 Safety Net Relief funding to aid CFB clinics affected by decreased patient volumes, workforce shortages due to illness, and those not equipped to transition to telemedicine.

Governor Bill Lee allocated \$6 million to TDH in COVID-19 relief funding to support CFB clinic capacity to deliver health care services during the pandemic. Additional COVID-19 relief funding was also provided for CFB clinics to transition to telemedicine and telehealth visits and included a provision to expand the definition of an allowable medical encounter to include telemedicine and telehealth visits. Despite the additional funding, clinics experienced significant workforce shortages during FY21.

Additionally, The Department of Health created a COVID-19 Laboratory Testing Reimbursement Program to cover reference laboratory fees associated with performing the COVID-19 PCR test and patient lab results. In an endeavor to support surge testing and infection control, the Department also provided an on-line platform to order PPE, COVID-19 specimen collection kits, COVID-19 CLIA-waived testing kits and correlating testing supplies, at no cost to Safety Net provider clinics.

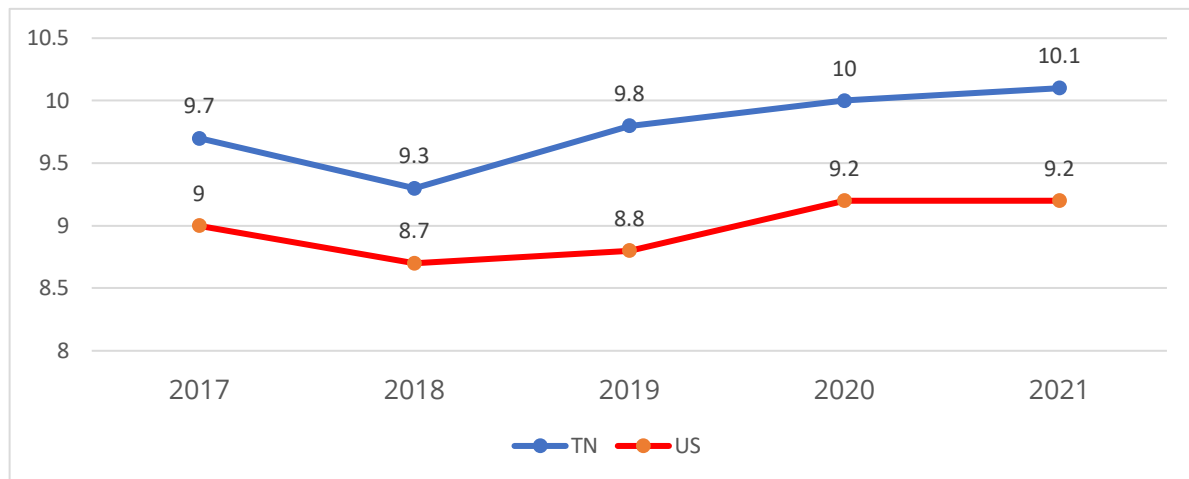

Introduction

In 2005, the Tennessee General Assembly approved Tenn. Code Ann. § 71-5-148, authorizing funding for the Health Care Safety Net for uninsured adults to aid individuals lacking insurance, and in need of medical, and/or emergency dental care, including services to support continuity of care through referrals for specialist care coordination. Tenn. Code Ann. § 68-1-123, adopted in 2006, requires the Commissioner of Health, in consultation with the Tennessee Department of Finance and Administration and other State agencies, such as the TDMHSAS, to provide a report to the General Assembly on data relating to access to care through safety net service providers, including the adequacy of access and the array of services available. The Uninsured Adult Healthcare Safety Net program helps to advance the Tennessee Governor's priority goal of Health and Welfare and the Tennessee Department of Health's Strategic Plan¹ to achieve better health by increasing both primary prevention and access to health care services.

The Tennessee Department of Health, the Tennessee Department of Finance and Administration, Division of TennCare, and TDMHSAS each administer funds allocated to support safety net programs and services. Each agency contracts with qualified service providers to deliver primary medical, dental care, mental and behavioral health care, and case management services to eligible adults in Tennessee.

According to the 2021 America's Health Rankings, published by the United Health Foundation using multiple sources, 10.1 percent of Tennessee's total population was uninsured in 2021, compared to 9.2 percent nationally, as shown in Figure 1 below. Tennessee ranked 37th among the 50 states for the percentage of the population that is uninsured.²

Figure 1: Comparison of Tennessee Uninsured Population and National Rates

Affordability remains the top-cited reason for failing to obtain health insurance, and approximately 78 percent of households in the higher-income and lower income brackets cite affordability as a reason for failing to obtain health insurance according to the Impact of TennCare Report.³

According to health insurance.org in Tennessee, 212,052 people enrolled in private health plans through the Tennessee exchange during the open enrollment period for 2021 coverage. That was an

increase of nearly 6 percent over the year before, when 200,445 people enrolled in plans for 2020. Enrollment had been higher in 2019, when 221,553 people bought coverage during the open enrollment period.⁴

The COVID-related enrollment window in 2021, combined with the enhanced premium subsidies created by the American Rescue Plan, may change enrollment throughout much of 2021. CMS reported that nearly 15,000 people had enrolled in plans through the Tennessee marketplace during the first month and a half of the COVID-related enrollment period (i.e., through March 31, 2021), compared with fewer than 5,000 enrollees during the same period the year before.⁴

TennCare enrollment increased by 6% from FY20 to FY21. The August 2021 TennCare Report shows individuals enrolled in the following MCO by region: Amerigroup Community Care - East Tennessee 155,729, Middle Tennessee 187,186, West Tennessee 135,571; BlueCare - East Tennessee 238,862, Middle Tennessee 190,762, West Tennessee 166,898; UnitedHealthcare Community Plan - East Tennessee 155,953, Middle Tennessee 188,479, West Tennessee 135,157; TennCare Select High - All Regions 35,637; TennCare Select Low - All Regions 16,106; PACE - 277; Awaiting assignment - 865 with a grand total of 1,607,482.⁵

Primary Care Plus and Project Access Providers are in 89 of 95 Tennessee counties, offering primary care, behavioral health, dental care, and care coordination services to uninsured Tennesseans ages 19-64 in the following settings (Figures 2,3, Appendix 1,2).

- 56 primary care Local Health Department (LHD) clinics, of which 16 are designated as Federally Qualified Health Centers (FQHC). Of the LHD FQHC sites, 6 offer dental services.
- 113 primary care FQHCs, which includes 18 dental clinics service sites.
- 44 primary care and 19 dental Community and Faith-Based Clinics; and
- 5 Project Access sites

Figure 2: Safety Net Primary Care and Project Access Locations

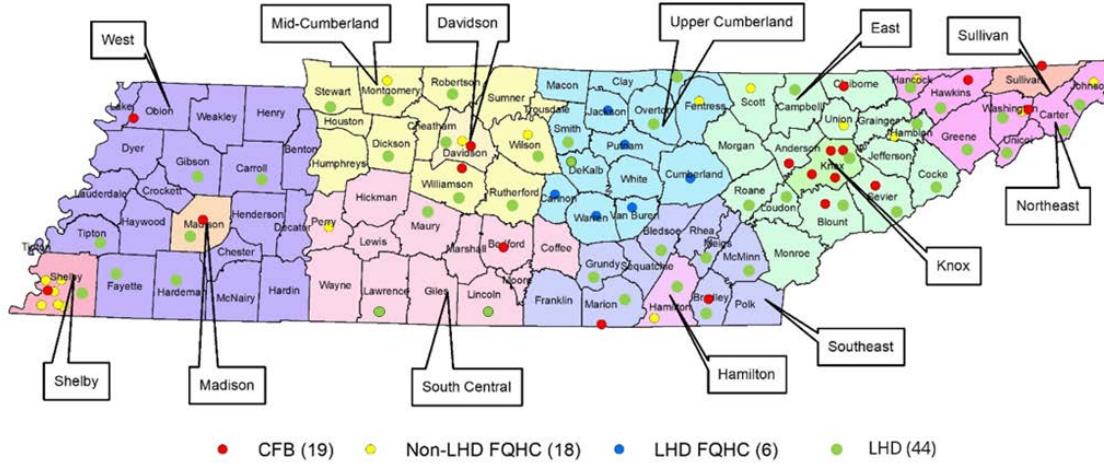

Figure 3: Safety Net Dental Clinic Locations

Community Mental Health Centers provide outpatient mental and behavioral health services, as well as case management and necessary health services for eligible Tennesseans statewide (Figure 4).

Figure 4: TDMHSAS Funded Behavioral Health Safety Net Locations

Uninsured Adult Safety Net Population

In FY21, Safety Net Primary Care Plus and Project Access participants were primarily forty to fifty-four years of age (41%), female (57%), and white (53%) (Figure 5).

Figure 5: Population Demographics

Figure 6 shows the chronic diseases reported by the total number of Safety-Net patients in FY21 in both Primary Care Plus and Project Access compared to the general adult population of Tennessee using 2019-2020 BRFSS data.⁵ Prevention and education of these chronic diseases is critical in improving the health of Safety Net patients across Tennessee.

Figure 6: Chronic Diseases Among Safety Net Patients and TN Adult Population

Figure 7 shows health risk factors reported by the total number of Safety-Net patients in FY21 in both Primary Care Plus and Project Access compared to the general adult population of Tennessee using 2019-2020 BRFSS data.⁵ Safety-Net clinic providers have a high burden on patients in need of health coaching and education to reduce risk factors.

Figure 7: Health Risk Factors Among Safety Net Patients and TN Adult Population

Provider Shortage Areas

Federally designated Health Professional Shortage Areas and state-designated Health Resource Shortage Areas identify communities underserved by health professionals. Ninety-three of ninety-five counties in Tennessee contain designated shortage areas for primary medical care, dental and/or mental health services.⁷

Health Professional Shortage Area is a county or parts of a county (such as a census tract), or public facility recognized as meeting or exceeding the standards of need for certain services and must meet or exceed the following thresholds. Appendix 3 represent the thirty counties with the worst population to provider ratios.

- For a Geographic designation, the population-to-physician ratio is greater than 3,500:1.
- For a Population designation, a segment of the population experiencing barriers to care has a population- to-physician ratio that is greater than 3,000:1.
- For a Facility designation, a public or private nonprofit medical facility is providing primary medical care services to an area or population group designated as having a shortage of primary care professionals, and the facility has insufficient capacity to meet the primary care needs of that area or population group. A community health center or homeless clinic is an example of such a designation.

Primary Care Access

To assess primary care access, the Tennessee Department of Health State Office of Rural Health and Health Access conduct a statewide Census of Primary Care Providers. The Census data is used to determine the ratio of the population to primary care providers, or the number of individuals served by one provider in a county. The statewide list of providers is compiled using primary care census data from the previous year and the current list of Tennessee licensed providers. The survey scope is physicians, advanced practice nurses, and physician assistants practicing family practice, general practice, pediatrics, general internal medicine, public health, obstetrics, gynecology, or OB/GYN in an outpatient setting. The survey is sent to individual providers and not practice location. Data is collected via mailed and electronic questionnaires, phone interviews, with multiple attempts made to collect data from each provider so the shortage designations are as accurate as possible.

Due to contributing factors such as outdated licenses, incomplete questionnaires, and invalid practice locations, estimations are then determined from previous cycle data or an average of other providers in the area. The final data is computed from each provider's Full-Time Equivalent (FTE). One FTE is calculated at direct patient care for 40 hours weekly, anything less is considered a partial FTE. For each county or Rational Service Area (RSA), the FTEs are summed and compared to the appropriate population of the County or RSA. The FTE of an area will be equal to or less than the number of providers in the area. The provider to population data collected from the census is shown by county with a corresponding map in Appendix 4. Counties represented on the maps in the none or worst category are listed in the table as "None identified" which means either no provider in that area or insufficient responses for that county. The ratio of primary care population to provider ratio is shown in Appendix 4: Table 1, Figure 1.

TennCare Providers

The population to provider ratio associated with access to a TennCare provider represents the number of TennCare Enrollees in the general population served by one primary care TennCare provider in a county. TennCare providers are defined as physicians, advanced practice nurses and physician assistants providing family and general practice, internal medicine, obstetrics, and pediatric health care. The TennCare enrollee population to provider ratio is shown in Appendix 4, Table 2, Figure 2.

Obstetric Providers

The worst primary care workforce shortages are in the field of Obstetrics. Ten Tennessee counties have zero obstetric providers. The population-to-provider ratio associated with access to an Obstetric provider represents the county population of women of childbearing age (15-44 years) served by one Obstetric provides. This is defined as physicians, advanced practice nurses, physician assistants, or certified nurse mid-wives who specialize in obstetrical care, or provide prenatal services and delivery, and clinicians who may provide obstetric services in addition to practicing in other patient care specialty areas. The population to obstetric provider ratio for each county is shown in Appendix 4: Table 3, Figure 3.

Pediatric Providers

The population-to-provider ratio associated with access to a Pediatric provider represents the number of children 0-18 years of age served by one pediatric provider in a county. This is defined as physicians, advanced practice nurses, or physician assistants with specialties in pediatrics or general pediatric care including those clinicians who may provide family and general practice, internal medicine, in addition to pediatric health care. The population to pediatric provider ratio for each county is shown in Appendix 4: Table 4, Figure 4.

Service Delivery Type

In FY21, the safety net service providers receiving funding through the Uninsured Adult Healthcare Safety Net program, and the separately funded services at Local Health Departments providing primary care service not designated as Federally Qualified Health Centers provided a combined total of 397,882 medical encounters to uninsured adults ages 19 to 64. This total also includes 24,138 medical encounters from the 16 separately funded Local Health Department FQHCs. Figure 8 below shows the percentage of medical encounters delivered by each type of safety net provider.

Figure 8: FY21 Percentage of Medical Encounters by Type of Safety Net Provider

Local Health Department (LHD) Primary Care Safety Net Services

In FY21, the 40 non-designated FQHC Local Health Department clinics provided 47,124 medical encounters for uninsured Tennesseans, a 13% decrease from FY20. These clinics do not receive funding through the Uninsured Adult Health Care Safety Net program. However, these clinics receive separate state funding to offer primary care and emergency dental services for uninsured adults including traditional public health services such as immunizations, family planning, screening for breast and cervical cancers, case management, and supplemental nutrition services for pregnant women, infants, and children (WIC). Table 1 below shows the number of medical encounters in FY21 for each age group in non-FQHC local health departments.

Table 1: FY21 Medical Encounters for Uninsured Adults in Non-FQHC LHDs

Safety Net Ages	Medical Encounters	% of Total Encounters
19-20 Years	942	2.00%
21-24 Years	2,700	5.73%
25-29 Years	3,525	7.48%
30-34 Years	3,561	7.56%
35-39 Years	3,726	7.91%
40-44 Years	4,398	9.33%
45-49 Years	5,894	12.51%
50-54 Years	7,632	16.20%
55-59 Years	7,926	16.82%
60-64 Years	6,820	14.47%
	47,124	100.00%

Funding Allocation FY21

In FY21, the Tennessee Department of Health State Office of Rural Health and Health Access administered a total of \$30.4 million in state allocated funding to support the Uninsured Adult Healthcare Safety Net Program. This amount included a base recurring of \$19.9 million and \$9.5 million non-recurring for Primary Care Plus, and an additional \$1 million non-recurring for Project Access expansion. Of the total allocation, 82.5 percent of the FY21 funding was allocated to support Primary Care Plus and the remaining 17.5 percent was allocated to support Project Access.

During FY21 a total of \$19.2 million was expended for adult uninsured primary care, dental and care coordination encounters (Figure 9). Other funding changes included \$9.0 million non-recurring funds for quality incentive payments for Primary Care Plus and \$3.8 million non-recurring for expand Project Access expansion (Figure 10). Primary Care Plus clinics are paid a percentage of the total quarterly amount budgeted. Payments are determined by the volume of patient care services reported quarterly. Patient volumes and their correlating per encounter payments may fluctuate from quarter to quarter due to several factors such as the total amount of the Safety-Net funding allocation and the volume of patient care services reported by individual provider as a proportion of all services provided. This funding methodology assures that all appropriated funding is distributed each year and that this is done in a manner proportional to the number of encounters provided. See Figure 11 for historical Safety Net expenditures FY17-FY21.

Figure 9: FY19-21 Safety Net Funding Distribution

Figure 10: FY21 Safety Net New Funding Distribution

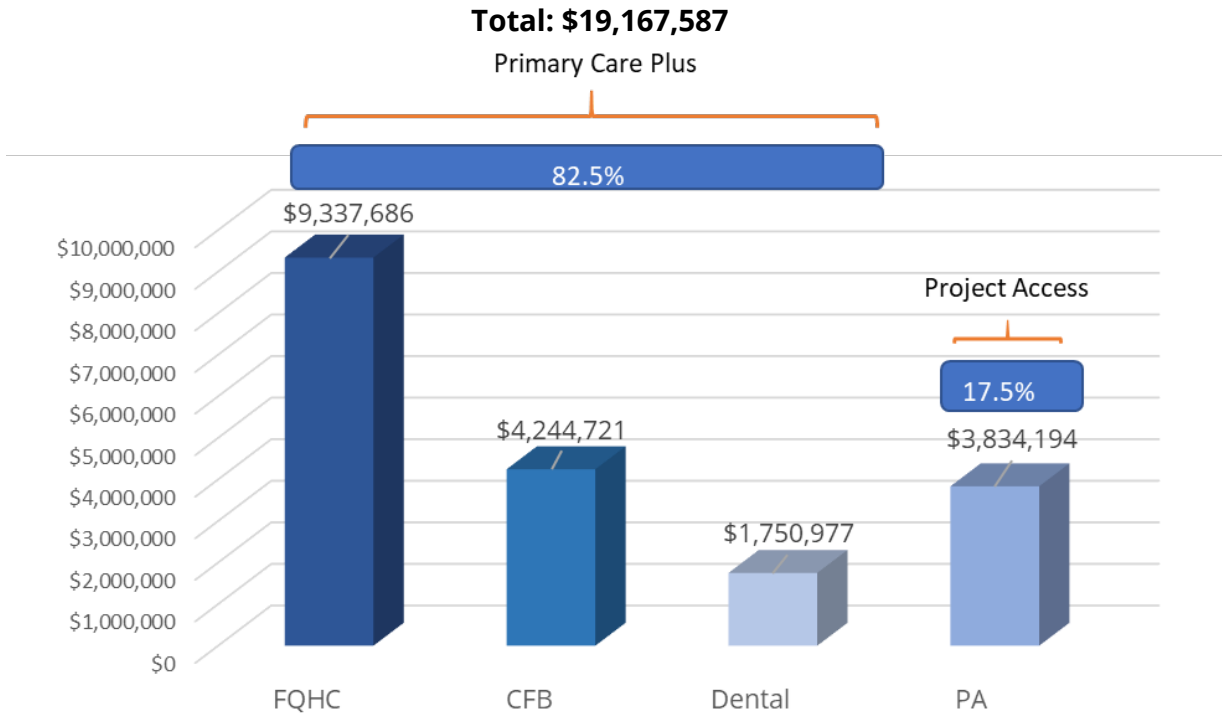

Figure 11: FY17-21 TDH Funded Safety Net Total Expenditures

Federally Qualified Health Centers

According to the Tennessee Primary Care Association, the statewide membership organization serving the Tennessee Federally Qualified Health Centers, an average of approximately 31% of patients served by a Community Health Center are uninsured. However, that percentage is as high as 60 percent in some FQHCs. In 2020, approximately 69 percent of FQHC patients had income levels below 100% of the Federal Poverty Level. In addition to funding through the Uninsured Adult Healthcare Safety Net Program, FQHCs access funding from a variety of sources such as grants from the U.S. Department of Health and Human Services (HHS) Health Resources and Services Administration (HRSA) and private foundations. Additionally, all are eligible to participate in the federal 340B Drug Pricing Program, which provides significant savings for patient medication costs.

FQHCs are pursuing several strategies to improve access to services and quality of care, including:

- Certification by the Joint Commission or recognition by the National Center for Quality Assurance (NCQA) as a Patient-Centered Medical Home (PCMH)
- Using population health management tools and resources to improve patient care
- Participation in and use of telehealth infrastructure to expand access to primary and specialty care services, patient and clinician education, and coordination of care delivered by multiple providers
- Participation in initiatives which support sharing of best practices and continuous improvement

Figure 12 represents the number of medical encounters provided by FQHCs from FY19 to FY21. There are 24,138 medical encounters from the 16 Local Health Department FQHCs included in the FY21 Safety Net total. Figure 13 represents the number of unduplicated patients served by FQHCs in FY19 to FY21. There are 10,228 unduplicated patients served by the 16 Local Health Department FQHCs included in the FY21 Safety Net count.

Figure 12: FY19-21 Federally Qualified Health Center Medical Encounters

Figure 13: FY19-21 Federally Qualified Health Center Unduplicated Patient Count

State Funded Community and Faith-Based Safety Net Providers

Community and Faith-Based (CFB) organizations provide one or more of the following services free or at reduced cost: preventive and wellness services, primary medical care, specialty care, oral health care, mental health services, substance abuse services, vision services, diagnostic services, and pharmaceutical assistance. The patients served by charitable care organizations frequently have poor health conditions arising from lack of access to preventive care services, social support networks and financial resources. Not-for-profit charitable organizations are important partners in the Tennessee Healthcare Safety Net, often leveraging the services of volunteers to fulfill clinical and administrative functions, in addition to donated funding, equipment and supplies. In many instances, state funding from the Uninsured Adult Healthcare Safety Net is a small but important percentage of the total resources required to fulfill their mission.

The Tennessee Charitable Care Network (TCCN) is the statewide membership association which serves as the collective voice for Tennessee’s free and charitable care clinics. Comprised of 52 members in 58 locations across the state, TCCN members provide healthcare in 70 of Tennessee’s 95 counties. Their mission is to provide consistent, culturally sensitive health care, Tennessee’s Charitable Care clinics, to minimize the inappropriate and costly utilization of emergency room services and other hospital resources while providing vulnerable Tennesseans with a stable medical home and continuity of care.

Research confirms that a lack of adequate health insurance and/or poor access to health care services leads to an overall poorer health status that impact attainment, employment, vulnerability to addictions, exposure to trauma, etc. In addition to the preventable suffering at a personal level caused by lack of health care, the societal costs are extraordinarily high, including but not limited to a disproportionate share of low-income, uninsured people living with multiple chronic conditions that go unmanaged and can lead to disability and early death. The disparity caused by lack of access to quality healthcare impacts people across the state - in urban and rural areas, of all races, nationalities, and sexual orientation, regardless of gender or age. Figure 14 represents the number of medical encounters provided by CFB Primary Care clinics in FY19 to FY21. Figure 15 represents the number of unduplicated patients served by the CFB Primary Care clinics FY19 to FY21.

Figure 14: FY19-21 Community and Faith-Based State Safety Net Medical Encounters

Figure 15: FY19-21 Community and Faith-Based State Safety Net Unduplicated Patient Count

Project Access Care Coordination Services

Project Access provides specialty care services to patients in 64 counties within five centralized metropolitan areas: Chattanooga, Johnson City, Knoxville, Nashville, and Memphis. The Project Access Program does not provide direct clinical health care services, but is affiliated with networks of clinical care providers, and assist patients with comprehensive care management, access to specialty care, diagnostic services, preventative care, and management of social service needs. Despite COVID-19, Project Access continued to provide care coordination services by transitioning to virtual visits, follow-up calls and referrals.

In FY21, the reimbursement for encounters changed for Project Access care coordination services. In addition, Project Access was funded separately from other service delivery types, receiving a total of \$6,057,500 in Uninsured Adult Health Care Safety Net funding. Although Figure 16 represents a three-year fiscal period. Project Access encounters were reported under the revised reimbursement, as seen in Figure 17. The network of providers included 5,995 physicians and other healthcare providers who provided free primary and specialty care services, as well as ancillary lab and diagnostic services between 2,400 – 2,700 uninsured Tennesseans per month. Collectively, in FY21, Project Access entities coordinated \$53 million in donated health services, for a return of \$9 for each \$1 of state-allocated funding.

Due to the limited number of clinics operating and limited capacity for referrals for specialty care from the doctors' offices, Project Access had an excess of funding that will be carried over in FY22 with the goal to continue to expand specialty care services by training and hiring more staff and expanding to additional surrounding counties.

Figure 16: FY19-21 Project Access Care Coordination Encounters

* FY21 encounters are not comparable to previous years

Figure 17: FY19-21 Project Access Care Coordination Unduplicated Patient Count

Project Access Programs

Appalachian Mountain Project Access (AMPA)

Services Provided: Coordination of specialty, diagnostic and inpatient medical care along with comprehensive case management of social service needs.

Population Served: Carter, Johnson, Unicoi, Washington, Sullivan, Greene, Hancock, Hawkins, Cocke, and Hamblen counties

Network of Service providers: 770 physicians and physician extenders volunteers providing primary, specialty, diagnostic, ancillary, and inpatient care along with 21 primary care clinics and 11 hospitals

Value of Donated Services: \$11 million in FY21; \$98 million since 2008

Hamilton County Project Access

Services Provided: Comprehensive coordination of specialty, diagnostic, and inpatient services, and connection to community resources.

Population Served: Hamilton and Bradley counties

Network of Service providers: 1,150 physicians and extender volunteers providing primary, diagnostic, and inpatient care and medical review at 14 primary care centers, 3 hospital systems with 7 campuses, and mental health partners

Value of Donated Services: \$12 million in FY2; \$213 million since 2004

Knoxville Area Project Access (KAPA)

Services Provided: Continuum of medical care and coordination with social services (food, housing, health literacy, transportation, drug/alcohol dependency)

Population Served: East Tennessee Region counties

Network of Service providers: 2,352 physicians and physician extenders, and all Knoxville area hospitals offering primary care, specialty, inpatient, ancillary, psychiatric care, and pharmacy services. These providers consist of 4 hospital systems with 6 campuses, primary care clinics with over 40 locations, as well as mental health partners

Value of Donated Services: \$25 million in FY21; \$375 million since 2006

Project Access Nashville

Services Provided Coordination of specialty, diagnostic and inpatient medical care along with comprehensive case management of social service needs.

Population Served: Middle Tennessee counties

Network of Service providers: 1,723 physicians and physician extender volunteers providing specialty, diagnostic, and inpatient care for 42 primary care clinics, serving in partnership with 2 hospital systems with 6 facilities and additional surgery centers

Value of Donated Services \$5 million in FY21; \$50 million since 2005

Project Access West Tennessee

FY2021 was the strategic building year to create a team and processes to arrange coordination of specialty, diagnostic and inpatient medical care along with comprehensive case management of social service needs. Projected service area includes Shelby, Tipton, and Madison counties.

Currently finalizing partnerships with four different primary care centers (including a novel partnership with the Memphis EMS and RADAR, LLC) representing more than 37,000 uninsured patients. Discussions have begun with three of the four major hospital corporations in Memphis and West Tennessee Healthcare in Jackson. Donated Services will begin in FY22, with first patients anticipated during Q2. Six unique specialties currently recruited among volunteer providers.

Oral Health Services

Access to oral health services is an important contributor to health and wellbeing, yet eight counties in Tennessee have no dental providers: Grainger, Grundy, Houston, Lake, Meigs, Moore, Pickett, Van Buren counties. According to the 2021 America's Health Rankings Report, Tennessee has 48.6 dentists for every 100,000 residents, compared to the nationwide rate of 61.2 dentists per 100,000 residents, ranking Tennessee 45th among the 50 states.¹ The dental population to provider ratio is shown in Appendix 4: Table 5, Figure 5.

In FY21, a total of 30 Primary Care Plus providers (11 newly funded in third quarter) received \$1,750,977 in funding to support oral health services for uninsured adults ages 19-64. The type of dental services allowed was expanded in FY21 (Figure 19), as compared to FY19-20 (Figure 20). A total of 102,340 procedures for 42,260 patient visits, 24,982 unduplicated patients, is shown in Figures 19 and 21 below.

Figure 18: FY21 Safety Net Dental Services Provided

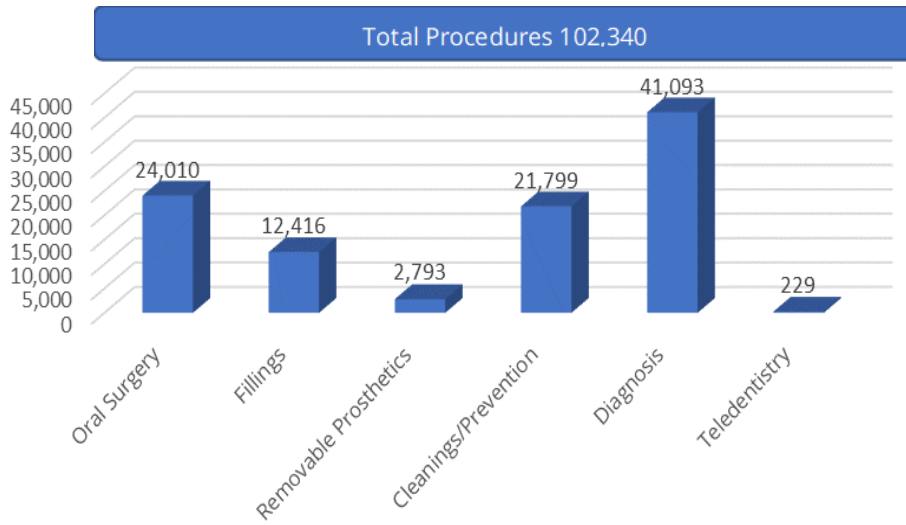

Figure 19: FY19-20 Safety Net Dental Services Provided

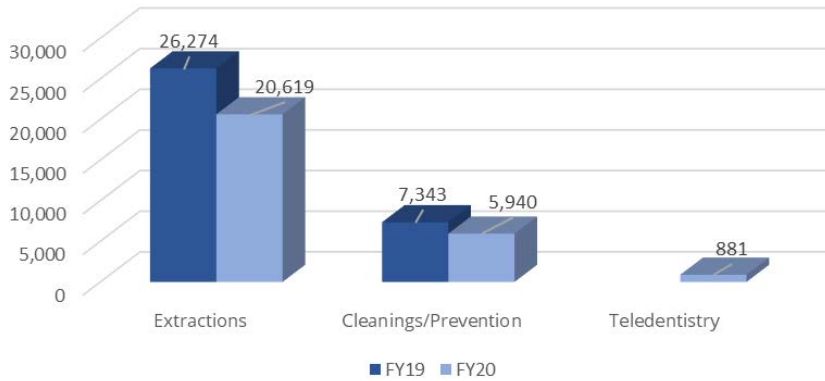

Figure 20: FY19-21 Safety Net Dental Unduplicated Patients

In addition to the oral health services supported by the state Uninsured Adult Healthcare Safety Net funds, other public and non-profit organizations provide a variety of dental services for uninsured Tennesseans.

Forty-six Local Health Department facilities provide emergency dental services to uninsured adults in 45 of Tennessee’s 95 counties. Only 30 facilities were staffed and open 1-5 days per week in FY21, due to lack of available staff. The Metro Public Health Department in Davidson County also offers emergency dental services, while the Shelby County Health Department provides emergency dental services for adults and comprehensive dental services for individuals less than 21 years old. The 30 LHD dental clinics provided 13,060 encounters to 7,747 patients.

SMILE ON 60+ (Senior Dental) is funded by the court through the Senior/Elder Trust. It is an innovative, statewide initiative with the goal of improving the overall health and quality of life of low-income, mobile seniors age 60+ through access to oral healthcare services and oral health community education. As the lead agency of SMILE ON 60+, Interfaith Dental designed and built this statewide network of care for seniors. The network is currently made up of 22 nonprofit and government partners with 32 locations.

Since SMILE ON 60+ began providing care in August of 2018, individuals from 93 counties have been able to access care through the network. Lawrence County and Maury County Health Departments were added later and provided direct care to 127 unique patients, completing approximately 631 patient visits during the 2020-2021 period.⁸

Table 2: SMILE ON 60+ Patient Encounters

	FY21	Total (Aug 2018-June 2021)
Total Encounters All encounter types with seniors (direct care, counseling, workshops, outreaches, referrals, navigation)	26,451	60,819
Unduplicated Number of Seniors	2,654	10,219
Unduplicated Direct Care Encounters Number of seniors who received care at a dental provider partner	1,889	6,400
Duplicate Direct Care Encounters	13,175	33,132

The Tennessee State Oral Health Plan serves as Tennessee’s statewide, comprehensive oral health plan. This plan supports the mission of the Tennessee Department of Health (TDH), “to protect, promote, and improve the health and prosperity of people in Tennessee”. The plan was formulated in accordance with Public Chapter 0968, which authorized the Tennessee Department of Health to develop a “comprehensive, state oral health plan”. The Plan frames the issues of dental disease while focusing on four overarching areas to address and improve oral health: 1) Monitoring Disease in Tennessee, 2) Oral Health Education & Advocacy, 3)

Prevention, and 4) Oral Health Resources & Workforce. The plan can be found at <https://www.tn.gov/health/health-program-areas/oralhealth/state-oral-health-plan.html>

During Fiscal Year 2021 the Tennessee Oral Health Data source grid was made available to the public. The data source grid provides information and instructions for accessing resources for dental care, preventive services, and various surveillance systems at the state and national level. The oral health grid is located on the department's website at <https://www.tn.gov/health/health-program-areas/oralhealth/state-oral-health-plan/oral-health-resources-and-workforce-updates/oral-health-data-resources.html>

The interactive Dental Care for Tennesseans Map was updated. The map is located on the website at <https://www.tn.gov/health/health-program-areas/oralhealth/dental-care-for-tennesseans.html>

Oral Health Services worked with Finance and Administration to provide information on dental resources for the MyTN app. MyTN is a mobile application providing personalized service delivery to Tennesseans through technology solutions. The website with information regarding MyTN is <https://www.tn.gov/health/health-program-areas/oralhealth/dental-care-for-tennesseans.html>

The ***Dental Care for Tennesseans*** map lists dental and health clinics across the state. These clinics help connect families to dental care. Some clinics may charge a lower fee. Dental services may be dental treatment, dental referrals, or a voucher (coupon) program.

Behavioral Health Safety Net of Tennessee

The Tennessee Department of Mental Health and Substance Abuse Services (TDMHSAS) administers the Tennessee Behavioral Health Safety Net Program. The program was initiated in 2005 as the Mental Health Safety Net with funding authorized by the Tennessee General Assembly through Tennessee Public Chapter No. 474 and Section 59 of the Tennessee Appropriations Act of 2005. The Behavioral Health Safety Net remains funded entirely through annual legislative appropriations to TDHMSAS.

The Tennessee Behavioral Health Safety Net provides essential outpatient mental health services to uninsured Tennesseans who meet program eligibility criteria through a network of 15 participating community mental health centers. The Behavioral Health Safety Net provides community-based services for people with severe mental illness and assists them to lead functional, productive lives. Essential services offered through the Behavioral Health Safety Net program include assessment, evaluation, individual and group therapy, case management, psychiatric medication management, laboratory testing related to medication management, and pharmacy assistance and care coordination. In FY20, an additional \$5 million was allocated by Tennessee General Assembly and the Governor to expand eligibility criteria. Income eligibility increased from 100 percent of the Federal Poverty Level to 138 percent of the Federal Poverty Level, as well as the minimum age for eligibility was lowered from 19 to 18 years of age. Also, transportation became a standard billable BHSN service.

In FY21, the Behavioral Health Safety Net for Adults program supported services for 39,840 individuals, 79 percent of those served received at least one BHSN service via telehealth. Thirty percent of all units of BHSN services were provided via telehealth. Compared to prior years, BHSN for Adults served 806 more individuals than in FY20 and more than 5,300 additional individuals than in FY19. There was an increase in number served by county of residence in 49 counties over the previous fiscal year. The top three utilized BHSN services by unique number served are Psychiatric Medication management, Case Management, and Individual Therapy.

In FY21, Governor Lee and the Tennessee General Assembly allocated an additional \$7.6 million to create the Children’s Behavioral Health Safety Net. The BHSN for Children expands essential mental health services to children ages 3 to 17. The program was operational by September 2020, and TDMHSAS continued to refine eligibility criteria through the program’s first year. Current eligibility criteria allow providers to serve any child 3-17 who has no insurance or inadequate coverage. TDMHSAS produced a statewide multimedia campaign to increase awareness and enrollment of BHSN for Children during FY21.

In FY21, the Behavioral Health Safety Net for Children program supported services for 436 children. BHSN services with highest utilization are Assessment and Evaluation, Individual Therapy, and Case Management. Sixty-nine percent of those served received at least one BHSN service via telehealth. 41% of all units of BHSN services were provided via telehealth.

Figure 21: Behavioral Health Safety Net Individuals Served

Behavioral Health Safety Net program serves eligible Tennesseans through a statewide provider network of fifteen Community Mental Health Agencies, operating over 150 physical sites in 73 counties, 56 of which are considered rural. Regardless of which Tennessee county of residence, the Behavioral Health Safety Net is available to all eligible Tennesseans. These Community Mental Health Agencies provided services to 39,840 individuals through the Behavioral Health Safety Net for Adults Program in FY21, an increase of 2 percent compared to FY20 and an increase of 16 percent compared to FY19 as shown in Figure 22. In FY21, 57 counties saw an increase in the number of county residents served and eight of the currently ranked most distressed counties saw an increase in the number of county residents served.

Access to Mental and Behavioral Health Services

According to the 2021 America’s Health Rankings Report, Tennessee is ranked 42nd among the 50 states for access to mental health professionals (psychiatrists, psychologists, licensed clinical social workers, counselors, marriage and family therapists, substance abuse treatment counselors, and advanced practice nurses and physician assistants specializing in mental health care), with 634:1 rate of mental health providers per 100,000 residents, far more than the national rate of 380.1 mental health providers per 100,000 residents.¹ The dental population to provider ratio is shown in Appendix 4: Table 6, Figure 6.

Special Populations

The Tennessee Department of Health jointly administers the Ryan White Part B program, with the Department of Health and Human Services. The Ryan White Program, acts as a payer of last resort. Through revenue streams gained from federal grants and qualifying pharmaceutical rebates, the Ryan White Part B program provides HIV services for eligible clients, who have incomes up to 400 percent of the federal poverty levels. Some of the key services provided by the Ryan White Part B program to eligible clients include: 1) the Insurance Assistance Program (IAP), which covers insurance premiums for outpatient medical care and prescriptions; 2) the HIV Drug Assistance Program (HDAP), which procures and directly delivers antiretroviral and other HIV treatment drugs to eligible clients that are uninsured; and 3) supporting a network of clinics, private practitioners, and health departments across the state that provide outpatient medical services to people living with HIV/AIDS. In 2021, the Ryan White Part B Program spent \$19.1 to served 10,610 clients. Figure 23 below provides an update on the number of clients the Tennessee Ryan White Part B program supports concerning IAP and HDAP services. The 8,362 clients in Tennessee that receive IAP and HDAP services from the Ryan White program, account for 44 percent of Tennessee’s estimated 19,000 persons living with HIV/AIDS.

Figure 22: Ryan White Part B HIV Drug Assistance Program (HDAP) and Insurance Assistance Program (IAP) Enrollment

Additionally, the Children's Special Services (CSS) program is a critical gap -filling program supported by federal and state Maternal and Child Health Block Grant funds. It serves as both a payor of last

resort for Children and Youth with Special Health Care Needs (CYSHCN) as well as a care coordination entity for these families. Founded in 1919, CSS is governed by state statute, and departmental rules. CSS program while striving to maintain the gap filling functions, also provides some direct services to those who do not have public or private insurance and population based, infrastructure and enabling services that support an integrated health care system to meet citizen needs. Services are provided in all 95 counties through local and metropolitan health departments. These services include eligibility determination for the CSS program and a comprehensive screening and assessment for social determinants of health needs. The CSS program provides reimbursement for medical examinations, screening and treatment preventive health exams, medically related durable medical equipment, food and formula, pharmaceuticals, surgeries, inpatient and outpatient medical care, physical, occupational and speech therapies, co-pays, deductibles and co-insurance, etc. Families may qualify financially for the program if their annual income is at or below 225percent of the federal poverty level. Families are also assisted with applying for TennCare and other available insurance as appropriate. In FY21, the CSS program spent \$2.3 million to serve 4739 individuals.

While CSS is core to CYSHCN services in Tennessee, CYSHCN priorities for this vulnerable population expand beyond the program to include broad family and stakeholder engagement particularly in the areas of pediatric to adult transition and patient centered medical home, as determined by the state needs assessment. The CYSHCN program has also coordinated some efforts at behavioral health integration, though this has largely taken place within health care delivery facilities, particularly FQHCs and safety net mental health centers. The CSS program consists of a statutorily defined Advisory Committee whose focus is on issues related to the management and operation of the CSS program (Tennessee's Title V CSHCN Program) as well as broader issues impacting the Children and Youth with Special Health Care Needs population.

Current Issues and Priorities

The Tennessee Department of Health (TDH) takes a comprehensive and collaborative approach to providing excellent healthcare services and increasing access to communities across Tennessee. The plan is facilitated by the TDH Strategic Plan and strategic planning process, in coordination with the State Office of Rural Health, and other stakeholders throughout the Department.

Additionally, TDH is pursuing new opportunities supported by federal funding to enhance and expand services to rural communities. Opportunities through CDC funding have allowed TDH to set up coordinating committees in each Grand Division of the state (West, Middle, and East), supported by an academic partner providing backbone support, to coordinate and expand direct service provision to rural and underserved communities. These efforts will support local community leadership, assessment, planning, and implementation efforts to improve health in rural counties across Tennessee.

In addition to increasing access to primary care in rural clinics across the state, the State Office of Rural Health administers the Medicare Rural Hospital Flexibility Program and the Small Hospital Improvement Grant Program to provide resources to the 42 rural hospitals with 50 beds or less. In addition to resources, the State Office of Rural Health and the Division of Health Disparities provide opportunities to collaborate and share ideas and resources to combat the individual needs of the communities.

Oral health services in Tennessee, particularly among high-risk and underserved populations, are severely deficient. To address this emergent healthcare shortage, Governor Bill Lee requested that the Tennessee Department of Health (TDH) convene a working group of stakeholders, with Commissioner Piercey as chair, to develop a comprehensive public-private partnership to broaden access to high-quality, low-cost dental care to Tennesseans. Organizations participating in the working group include TDH, TennCare, dental schools, non-TDH safety net dental clinics, private sector dentists, non-profit groups, and dental payors. The goals of this working group were to develop initial recommendations for addressing the urgent need for increased access to dental care in Tennessee, particularly among rural and other underserved populations. These included increasing dental school class sizes to bolster the pipeline of new dentists in the state, and better staffing of TDH clinics and safety net clinics to expand services and access for uninsured populations.

Conclusion

The Uninsured Adult Healthcare Safety Net fund helps to fulfill the mission of the Tennessee Department of Health to protect, promote, and improve the health and prosperity of Tennessee by enhancing equitable access to quality, affordable primary care, dental, behavioral health, and care coordination services for uninsured adults in Tennessee. Likewise, the Behavioral Health Safety Net advances the mission of the Tennessee Department of Mental Health and Substance Abuse Services to create collaborative pathways to resiliency, recovery and independence for Tennesseans living with mental illness and substance use disorders.

The Tennessee Department of Health is grateful to the commitment, hard work, and innovation of its partners and providers for their collaborative work to address the healthcare challenges together. Tennessee Department of Health also wants to acknowledge and recognize each of the dedicated professionals and volunteers at community health centers, community and faith-based clinics, Project Access entities, community mental health agencies and local health departments with support from professional associations including as the Tennessee Primary Care Association, the Tennessee Charitable Care Network, the Tennessee Association of Mental Health Organizations, and many others. The greatest strength of the Uninsured Adult Safety Net Program is the dedicated workforce and their ability to provide, sustain, and increase healthcare services for the most vulnerable Tennesseans during an extremely challenging year. Additionally, we appreciate Tennessee Governor Bill Lee and members of the Tennessee General Assembly for increasing the funding to support expansion of safety net programs to meet the needs of rural Tennesseans, remove the barriers to care, and work to overcome the ongoing challenges to promote equitable health access in Tennessee.

Glossary of Terms

Behavioral Health Safety Net - Pursuant to Tenn. Code Ann. § 71-5-148, the behavioral health safety net fund provides support for community-based providers of behavioral health services to seriously and persistently mentally ill adults who are uninsured and lack financial resources to secure behavioral health care.

Census of Primary Care Providers - A census that is conducted annually by the Tennessee Department of Health State Office of Rural Health and Health Access for 4 categories of healthcare providers: Primary Care, Obstetrics, Pediatrics, and TennCare. The Census collects full-time equivalents data for Physicians and Mid-level Providers (advance practice nurses and physician assistants). The purpose of the Census is to determine the ratios of population to healthcare providers in order to accurately identify Health Resource Shortage Areas in the state.

Federally Qualified Health Center (FQHC) - Federally Qualified Health Centers are public and private non-profit clinics that meet certain criteria under the Medicare and Medicaid programs and receive federal grant funds under the Health Center Program, established as Section 330 of the Public Health Service Act (PHSA). Some target specially defined populations such as migrant and seasonal farmworkers or homeless persons, while others target a general community and are commonly referred to as “community health centers.” These facilities meet the requirements of 42 U.S.C. § 1396d(l)(2)(B) and 42 U.S.C. § 254b. Applications to be designated as an FQHC are considered only when additional funding becomes available.

Health Care Safety Net for Uninsured - Pursuant to Tenn. Code Ann. § 71-5-148(a) the health care safety net program provides funding in support of medical and dental assistance to uninsured adults, 19-64 years of ages.

Health Care Services - As applied to FQHCs by Tenn. Code Ann. § 71-5-148(2) means the same as “Primary Care” and “Required Primary Health Services” and “Behavioral Consultations” as applied to FQHCs by 42 U.S.C. § 254b and incorporated in 42 U.S.C. § 1396d(l)(2)(B).

Health Professional Shortage Area (HPSA) - Federally designated county, parts of a county (such as a census tract), or public facility recognized as meeting or exceeding the standards of need for certain services. Primary care HPSA status is a national measure used to denote difficulties in access to care. A HPSA must meet or exceed the following thresholds:

- For a Geographic designation, the population-to-physician ratio is greater than 3,500:1.
- For a Population designation, a segment of the population experiencing barriers to care has a population-to-physician ratio that is greater than 3,000:1.
- For a Facility designation, a public or private nonprofit medical facility is providing primary medical care services to an area or population group designated as having a shortage of primary care professionals, and the facility has insufficient capacity to meet the primary care needs of that area or population group. A community health center or homeless clinic is an example of such a designation

Medical Encounter - A day on which a primary care provider meets with an uninsured adult regardless of the number of procedures performed or the number of primary care providers who see the uninsured adult.

Primary Care Provider or PCP - A physician (MD or DO), licensed psychologist, licensed clinical social worker (LCSW), advanced practice nurse (APN), licensed medical social worker (LMSW), psychiatric nurse specialist (PNS), certified nurse midwife, or physician assistant (PA) actively licensed to practice in Tennessee.

Sliding Scale - Rates charged to an uninsured adult based on 42 U.S.C. § 254b(k)(3)(G) and 42 C.F.R. § 51c.303(f).

Uninsured Adult - A patient aged nineteen (19) through sixty-four (64) years who is uninsured pursuant to Tenn. Code Ann. §71-5-148(a).

Appendix 3: Health Resource Shortage Areas 2021

In 1989, the Tennessee General Assembly amended the Tennessee Code Annotated, Title 66, Chapter 29, Part 1 to require the Commissioner of Health to designate Health Resource Shortage Areas, to inform decisions about allocation of funding for programs intended to encourage the location of health care practitioners in areas of greatest need. Health Resource Shortage Areas (HRSA) are identified as the 30 counties of the state with the worst population- to- provider ratios, as calculated by comparing the relevant population to the number of full-time equivalent clinicians practicing in that area, as follows:

Health Resource Shortage Area (HRSA): The 30 highest ranking "population-to-provider ratios" for Rational Service Areas designated for Primary Care, Obstetric, Pediatric, TennCare and Dental providers.

Note: Multiple counties may have the same rank number resulting in the top 30 shortage areas possibly having more than 30 counties.

TennCare HRSA: The 30 highest ranking TennCare enrollees to TennCare provider ratios among the TennCare Rational Service Areas. TennCare primary care providers are defined a physician, advanced practice nurse and physician assistant providing primary care services to the TennCare enrollees within a TennCare Rational Service Area.

Primary Care HRSA: The 30 highest ranking total population to primary care provider ratios among the Primary Care Rational Service Areas. A Primary Care provider is defined as a family practice, internal medicine and general practice physician, family nurse practitioners and physician assistants.

Obstetric HRSA: The 30 highest ranking female population of childbearing age (15-44 years) to obstetric provider ratios among the Obstetric Rational Service Areas. An obstetric provider is defined as a physician, physician assistant, nurse practitioner or certified nurse mid-wife who specializes in obstetrical care or provides prenatal services and delivery or who may provide these services in addition to practicing in another specialty care area.

Pediatric HRSA: The 30 highest ranking population of children, 0-18 years, to pediatric provider ratios among the Pediatric Rational Service Areas. A pediatric provider is defined as a physician, nurse practitioner and physician assistant specializing in pediatrics or general pediatric care or who may provide these services in addition to specializing in family medicine, internal medicine, or general practice medicine.

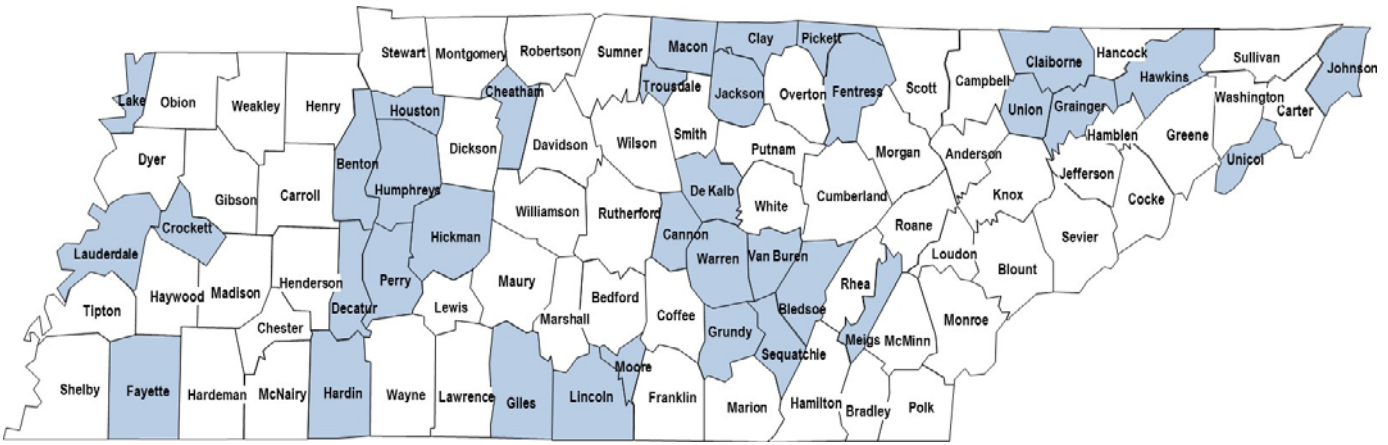

Dental HRSA: The 30 highest ranking total population to primary care dental provider ratios among the Dental Rational Service Areas. A primary care dentist is defined as a DDS, DMD or pediatric dentist.

Appendix 3, Figures 1 through 5 represent accumulated data from the Census of Primary Care and the Census of Dental Care. The FTEs are computed based on the hours offering direct patient care for percentages of TennCare, Pediatrics, Prenatal and Delivery as reported on the questionnaire. Appendix 3, Figure 6 represents Health Professional Shortage Areas as determined by the Health Resources and Services Administration (HRSA)⁹.

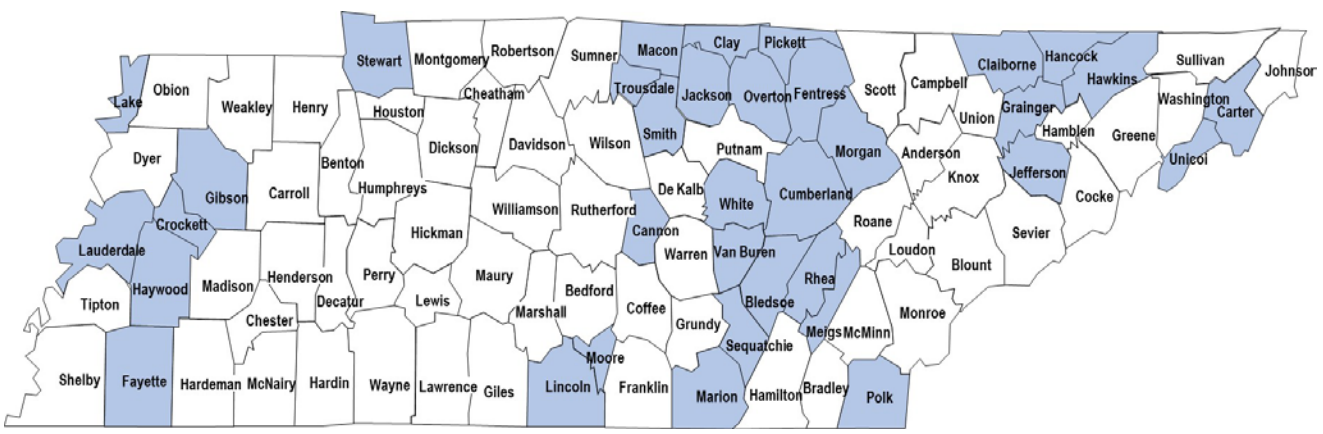

Appendix 3 Figure 4: Pediatric Health Resources Shortage Areas 2021
